*Strengthening Forensic Science in the United States - National Research Council 2009-07-29*

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account

of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

**Parent's Guide to Coping with Autism** - Sarah Ziegel 2016-07-31  
This is an essential guide for parents and carers coping with children with autism. When Sarah Ziegel's twin boys were diagnosed with autism, aged almost three, she realized that there was very little practical information about what to do. When her next two children were also diagnosed with the condition, she was even more determined to put that lack of information right. This book is the result of Sarah's experiences of dealing with autism in the family. While covering personal aspects such as coping emotionally with a diagnosis, the book also tackles practical matters, such as education and the EHCP process, how to get help and support, and also considers the medical side of autism. Written by a former nurse, and full-time mother and carer, A Parent's Guide to Coping

with Autism is a highly sensitive and professional guide and is the book you will want to reach for when faced with a diagnosis, or if you simply want to find out more about the condition.

Promoting Positive Behavioral Outcomes for Infants and Toddlers - Heather Agazzi 2020-10-14

This book provides a guide for planning, providing, and documenting effective early interventions for infants and toddlers and their families. The book focuses on the approximately 13% of U.S. children under age 3 who have developmental delays/disabilities, many of which may impair their ability to talk, move, learn, socialize, and become independent. When delivered effectively, early intervention can improve daily function and outcomes for these children, many of whom present with multiple and unique challenges. Each chapter in this book is written to guide practitioners, clinicians, therapists, and related professionals in their daily work with young children and their families. It addresses everyday challenges, including creating routines for parents of infants and toddlers, teaching parents how to play with their children and respond to problem behaviors, and managing caregiver stress. Promoting Positive Behavioral Outcomes for Infants and Toddlers is an essential resource for scientist-practitioners/professionals and clinicians as well as researchers and graduate students in child and school psychology; educational psychology; behavioral therapy; infancy and early childhood development; speech pathology, and occupational therapy.

Road Map to Holland - Jennifer Graf Groneberg 2008-04-01

An exceptional memoir that provides emotional insight and practical advice. It's like planning a trip to Italy, only to get off the plane and discover you're actually in Holland. You need a new road map, and fast... When Jennifer Groneberg and her husband learned they'd be having twin boys, their main concern was whether they'd need an addition on their house. Then, five days after Avery and Bennett were born, Avery was diagnosed with Down syndrome. Here, Jennifer shares the story of what followed. She dealt with doctors-some who helped, and some who were disrespectful or even dangerous. She saw some relationships in her life grow stronger, while severing ties with people who proved unsupportive. And she continues to struggle to find balance in the hardships and joys of raising a child with special needs. This book is a resource, a companion

for parents, and above all, a story of the love between a mother and her son-as she learns that Avery is exactly the child she never knew she wanted.

**Photography Books Index III** - Martha Kreisel 2006

While the Internet is an important source for locating photographic images, there still are hundreds of photography books published each year for whose contents there is no external access. This second supplement to Photography Books Index addresses this need by analyzing important photographic anthologies that were published since 1985. Accessing more than fifty photographic anthologies that are widely held in libraries across the country--along with images from two critical annual compilations, Best of Photojournalism and Graphis Annual--this book identifies photographs that record the history of our times. With nearly twice the number of works indexed in the first supplement, Photography Books Index III: A Subject Guide to Photo Anthologies cites a wider scope of publications. This reference guide provides an important index to contemporary as well as historical photographers, including those for whom full monographs have not been published. Photographs of important individuals as well as photographic records of cataclysmic events such as war, genocide, and mass starvation also can be located through this index. Extensive descriptions of the individual photographs--from the commonplace to the extraordinary--are identified in this volume. Organized into three sections--Photographers, Subjects of Photographs, and Portraits of Named Individuals--these descriptions provide the researcher with important information on each photograph. An essential volume for all public, special and academic libraries, this index will be an invaluable resource for reporters, historians, academics, students and anyone wishing to research photographs and photographers.

**Reducing the Odds** - National Research Council 1999-02-13

Thousands of HIV-positive women give birth every year. Further,

because many pregnant women are not tested for HIV and therefore do not receive treatment, the number of children born with HIV is still unacceptably high. What can we do to eliminate this tragic and costly inheritance? In response to a congressional request, this book evaluates the extent to which state efforts have been effective in reducing the perinatal transmission of HIV. The committee recommends that testing HIV be a routine part of prenatal care, and that health care providers notify women that HIV testing is part of the usual array of prenatal tests and that they have an opportunity to refuse the HIV test. This approach could help both reduce the number of pediatric AIDS cases and improve treatment for mothers with AIDS. Reducing the Odds will be of special interest to federal, state, and local health policymakers, prenatal care providers, maternal and child health specialists, public health practitioners, and advocates for HIV/AIDS patients. **Count Us In** - Jason Kingsley 1994-01-12

Award winner: "Hearing about Down syndrome directly from these young men has a good deal more impact than reading any guide from a professional." —Booklist This book is in Mitchell and Jason's own words. . .

. . . We wanted readers to have a true-to-life sense of their charm, their directness, their humor and warmth, and, yes, their intelligence. At ages nineteen and twenty-two, respectively, Jason Kingsley and Mitchell Levitz shared their innermost thoughts, feelings, hopes, dreams—and their experiences growing up with Down syndrome. Their frank discussion of what mattered most in their lives—careers, friendships, school, sex, marriage, finances, politics, and independence—earned Count Us In numerous national awards, including the EDI Award from the National Easter Seal Society. More important, their wit, intelligence, candor, and charm made for a powerful and inspirational statement about the full potential of people with developmental disabilities, challenging prevailing stereotypes. In this edition, with a new afterword, the authors also discuss their lives since then: milestones and challenges, and changes both expected and unexpected. "Their parents were told to expect nothing. But Jason Kingsley and Mitchell Levitz were lucky, because their parents didn't listen. They gave their sons that chance to show how far they could go—and they've astounded everyone!" —Jane Pauley "This single volume will do more to change stereotypes about Down syndrome than any book I have read. These two young men steal our hearts and wash away generations of misconceptions." —Mary L. Coleman, MD, Emeritus, Georgetown University "An excellent illustration of what it's like to have Down syndrome . . . Most moving here are the portrayals of strong family relationships." —Publishers Weekly "Will open eyes and touch the heart." —Library Journal

*Down Syndrome: From Understanding the Neurobiology to Therapy* - 2012-10-16

Down syndrome (DS) is the most common example of neurogenetic aneuploid disorder leading to mental retardation. In most cases, DS results from an extra copy of chromosome 21 (HSA21) producing deregulated gene expression in brain that gives raise to subnormal intellectual functioning. The topic of this volume is of broad interest for the neuroscience community, because it tackles the concept of neurogenomics, that is, how the genome as a whole contributes to a neurodevelopmental cognitive disorders, such as DS, and thus to the development, structure and function of the nervous system. This volume of Progress in Brain Research discusses comparative genomics, gene expression atlases of the brain, network genetics, engineered mouse models and applications to human and mouse behavioral and cognitive phenotypes. It brings together scientists of diverse backgrounds, by facilitating the integration of research directed at different levels of biological organization, and by highlighting translational research and

the application of the existing scientific knowledge to develop improved DS treatments and cures. Leading authors review the state-of-the-art in their field of investigation and provide their views and perspectives for future research. Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered. All chapters include comprehensive background information and are written in a clear form that is also accessible to the non-specialist.

**Down's Syndrome Screening and Reproductive Politics** - Gareth M. Thomas 2017-03-16

In the UK and beyond, Down's syndrome screening has become a universal programme in prenatal care. But why does screening persist, particularly in light of research that highlights pregnant women's ambivalent and problematic experiences with it? Drawing on an ethnography of Down's syndrome screening in two UK clinics, Thomas explores how and why we are so invested in this practice and what effects this has on those involved. Informed by theoretical approaches that privilege the mundane and micro practices, discourses, materials, and rituals of everyday life, *Down's Syndrome Screening and Reproductive Politics* describes the banal world of the clinic and, in particular, the professionals contained within it who are responsible for delivering this programme. In so doing, it illustrates how Down's syndrome screening is 'downgraded' and subsequently stabilised as a 'routine' part of a pregnancy. Further, the book captures how this routinisation is deepened by a systematic, but subtle, framing of Down's syndrome as a negative pregnancy outcome. By unpacking the complex relationships between professionals, parents, technology, policy, and clinical practice, Thomas identifies how and why screening is successfully routinised and how it is embroiled in both new and familiar debates surrounding pregnancy, ethics, choice, diagnosis, care, disability, and parenthood. The book will appeal to academics, students, and professionals interested in medical sociology, medical anthropology, science and technology studies (STS), bioethics, genetics, and/or disability studies.

**Midwifery Practice** - Jo Alexander 1993-11-11

The chapter structure adopted in the first three books is retained, and, as before, presentation of a broad-ranging survey and analysis of key research literature placed in the context of clinical practice is the guiding philosophy behind the whole book.

Mental Wellness in Adults with Down Syndrome - Dennis McGuire 2021

This thoroughly updated second edition of *Mental Wellness in Adults with Down Syndrome* is upbeat and accessible in tone, yet encyclopedic in scope. The size of the book reflects both the breadth of the authors' knowledge, acquired as cofounders of the first medical clinic dedicated solely to the care of adults with Down syndrome, and the number of psychosocial issues and mental disorders that can affect people with Down syndrome. It's the go-to guide for parents, health practitioners, and caregivers who support teens and adults with Down syndrome. The book emphasizes that understanding and appreciating both the strengths and challenges of people with Down syndrome is the key to promoting good mental health. It shows readers how to distinguish between bona fide mental health issues and common characteristics of Down syndrome, quirks, or coping strategies. For example, although talking to oneself can be a sign of psychosis, many adults with Down syndrome use self-talk as an effective problem-solving strategy. The second edition includes a new chapter on sensory issues (written by Dr. Katie Frank) and on regression, expanded and now separate chapters on communication, concrete thinking, and visual memory, and an extensively updated chapter on Alzheimer's disease citing abundant new research. Other chapters cover a range of conditions and assessment and treatment options: What Is Normal?; Self-Esteem & Self-Image; Self-Talk; Social Skills; Grooves & Flexibility; Mood & Anxiety Disorders; Obsessive-Compulsive Disorder; Psychotic Disorders; Eating Refusal; Challenging Behavior; Self-Injurious Behavior; Autism; Tics, Tourette Syndrome & Stereotypies; and Life-Span Issues.

**SIDS Sudden Infant and Early Childhood Death** - Roger W. Byard  
2018-04

This volume covers aspects of sudden infant and early childhood death, ranging from issues with parental grief, to the most recent theories of brainstem neurotransmitters. It also deals with the changes that have occurred over time with the definitions of SIDS (sudden infant death syndrome), SUDI (sudden unexpected death in infancy) and SUDIC (sudden unexpected death in childhood). The text will be indispensable for SIDS researchers, SIDS organisations, paediatric pathologists, forensic pathologists, paediatricians and families, in addition to residents in training programs that involve paediatrics. It will also be of use to other physicians, lawyers and law enforcement officials who deal with these cases, and should be a useful addition to all medical examiner/forensic, paediatric and pathology departments, hospital and university libraries on a global scale. Given the marked changes that have occurred in the epidemiology and understanding of SIDS and sudden death in the very young over the past decade, a text such as this is very timely and is also urgently needed.

[Intersectional Trauma in American Women Writers' Incest Novels from the 1990s](#) - Marinella Rodi-Risberg 2022-03-24

This book explores the intersections of sexualized, gendered, and racialized traumas in five US novels about father-daughter incest from the 1990s. It examines how incest can be connected to wider past and present structural oppression and institutional abuse, and what fiction looks like that testifies against and references a historical background of slavery, poverty, settler colonialism, annexation, and immigration. Investigating the means of resistance used against attempts at silencing and denial in these texts, the book also shows how contemporary women's novels can propose social change. Overall, this study uniquely argues that the individual trauma of incest in these texts must be understood in relation to histories of and present collective wounding against marginalized communities. By sitting at the intersections between trauma theory and US third world feminism, it allows for theory to meet literary activism.
