The Patent-Competition Interface in Developing Countries -

Thomas K. Cheng 2021-12-16

This book proposes an approach to the patent-competition interface for developing countries. It puts forward a theoretical framework after canvassing relevant policy considerations and examines the many reasons why patent protection is not essential for generating innovation incentives in developing countries. These include the tendency of the patent system to overcompensate innovators, the availability of other appropriation mechanisms for innovators to monetize their innovations, and the lack of appropriate technological capacity in many developing countries to take advantage of the incentives generated by the patent system. It also argues that developing countries with a small population need not pay heed to the impact of their patent system on the incentives of foreign innovators. It then proposes a classification of developing countries into production countries, technology adaptation countries, and proto-innovation countries and argues that dynamic efficiency considerations take on different meanings for developing countries depending on their technological capacities. For the vast majority of developing countries bereft of meaningful innovation capacity, foreign technology transfer is the main vehicle for technological progress. The chief dynamic policy consideration for these countries is hence incentives for technology transfer instead of innovation incentives. There are three main means of voluntary technology transfer: importation of

technological goods, foreign direct investment, and technology licensing. Competition law regulation of patent exploitation practices interacts with these three means of technology transfer in different ways and an appropriate approach to the patent-competition interface for these countries needs to take these into account. Distilling all these considerations, the book proposes a development stage-specific approach to the patent-competition interface for developing countries. The approach is then applied to a number of patent exploitation practices, including unilateral refusal to deal, patent tying, excessive pricing for pharmaceuticals, reverse payment settlements, and restrictive licensing practices.

The Oxford Handbook of Population Ethics - Gustaf Arrhenius 2022-04-08
'The Oxford Handbook of Population Ethics' presents up-to-date theoretical analyses of various problems associated with the moral standing of future people and animals in current decision-making. The essays in this handbook shed light on the value of population change and the nature of our obligations to future generations. It brings together world-leading philosophers to introduce readers to some of the paradoxes of population ethics, challenge some fundamental assumptions that may be taken for granted in debates concerning the value of population change, and apply these problems and assumptions to real-

world decisions.--

Shadow Warrior - David Fraser McTaggart 2002

He's cold. He's calculating. He's Machiavellian. He's unremorseful. He's unremitting. I mean he will just do it, whatever he's got to do, and then he'll invite you out for a beer. Peter Wilkinson, one of McTaggart's most trusted colleagues. David McTaggart captured public attention in 1972 and 1973 when he sailed his small boat into a French nuclear-testing site at Mururoa atoll. In 1973, McTaggart successfully delayed the test and led the French to send seven commandos to ram his ketch Vega and attack the crew. McTaggart almost lost his right eye in the scuffle. Fortunately for McTaggart, the whole incident was captured on still camera and caused an international uproar and to the founding of Greenpeace International. For more than three decades, this restless and driven man took on the world's rich and powerful. In the process he not only created a long list of friends but an equally impressive list of enemies. He retired to Italy in 1991 and died in a car crash in March 2001 aged 68. The bulk of his autobiography was written before his death and completed from notes.

The British Hegelians - Peter Robbins 2019-11-11

Originally published in 1982, this volume examines the sources of British Hegelian thinking, the lines of its development and intellectual relationships among members of the school. The sources in this book include twentieth century Marxians who pioneered the move 'back to Hegel' such as Gramsci and Lukacs. It includes brief biographical entries of the principal British Hegelians and of minor figures who paved the way

for Hegel's entry into British philosophy.

A Fresh Look at Empiricism - Bertrand Russell 1996

Volume 10 brings together Russell's writings on ethics, politics, religion and academic philosophy. During the period covered by this volume, Bertrand Russell first retired from and then resumed his philosophical career. In 1927 he published two philosophy books, *The Analysis of Matter* and *An Outline of Philosophy*. His next book in academic philosophy, *An Inquiry into Meaning and Truth*, was not published until 1940. Yet, Russell published a significant amount of essays and popular books between 1927 and 1946, mostly to finance the running of Beacon Hill School, and his growing family. Those years also saw his break-up with Dora Russell, his marriage to Patricia (Peter) Spence and a move of the family to the United States. Volume 10 brings together Russell's writings on ethics, politics, religion and academic philosophy. It is an invaluable guide to the thought and development of one of the most famous philosophers of this century.

Temporal Asymmetries in Philosophy and Psychology - Christoph
Hoerl 2022-02-24

Humans' attitudes towards an event often vary depending on whether the event has already happened or has yet to take place. The dread felt at the thought of a forthcoming exam turns into relief once it is over. Recent research in psychology also shows that people value past events less than future ones, such as offering less pay for work already carried out than for the same work to be carried out in the future. This volume brings together philosophers and psychologists with a shared interest in such psychological past/future asymmetries. It asks questions such as: What different kinds of psychological past/future asymmetries are there, and how are they related? Under what conditions do humans exhibit them? To what extent do they reflect features of time itself, or particular

beliefs people have about time? Are they rational, or at least rationally permissible, or should we aspire to being temporally neutral? What exactly does temporal neutrality consist of?

Anglo-Indian Attitudes - Clive Dewey 1993-01-01

In the years between the Indian Mutiny and Independence in 1947 the Indian Civil Service was the most powerful body of officials in the English-speaking world. 300,000,000 Indians, a sixth of the human race, were ruled by 1000 Civilians. With Whitehall 8000 miles away and the peasantry content with their decisions, they had the freedom to translate ideas into action. *Anglo-Indian Attitudes* explores the use they made of their power by examining the beliefs of two middle ranking Civilians. It shows, in great detail, how they put into practice values which they acquired from their parents, their teachers and contemporary currents of opinion. F.L. Brayne and Sir Malcolm Darling reflected the two faces of British imperialism: the urge to assimilate and the desire for rapprochement. Brayne, a born-again Evangelical, despised Indian culture, thought individual Indians were sunk in sin and dedicated his career to making his peasant subjects industrious and thrifty. Darling, a cultivated humanist, despised his compatriots and thought that Indians were sensitive and imaginative. Brayne and Darling personified two ideologies that pervaded the I.C.S. and shaped British rule in India. This book, which is based on two of the richest sets of personal papers left by I.C.S. officers, is both an important contribution to the history of British India and a telling commentary on contemporary values at home.

Birds of British Columbia, Volume 4 - Wayne Campbell 2001-02-23

This much-awaited final volume of *The Birds of British Columbia* completes what some have called one of the most important regional ornithological works in North America. It is the culmination of more than 25 years of effort by the authors who, with the assistance of thousands of dedicated volunteers throughout the province, have created the basic reference work on the avifauna of British Columbia. Volume 4 covers the last half of the passerines and describes 102 species, including the warblers, sparrows, grosbeaks, blackbirds, and finches. The text builds upon the authoritative format of the previous volumes and is supported by hundreds of full-colour illustrations, including detailed distribution maps, unique habitat shots, and beautiful photographs of the birds, their nests, eggs, and young. In addition, a species update lists and describes 27 species of birds new to the province since the first three volumes were published. The book concludes with *Synopsis: The Birds of British Columbia into the 21st Century*, which synthesizes data and information from all four volumes and looks at the conservation challenges facing birds in the new millennium. The four volumes in *The Birds of British Columbia* provide unprecedented coverage of the region's birds, presenting a wealth of information on the ornithological history, regional environment, habitat, breeding habits, migratory movements, seasonality

and distribution patterns of 472 species of birds. It is the complete reference work for birdwatchers, ornithologists and naturalists.

The Oxford Handbook of Consequentialism - Douglas W. Portmore 2020

"This handbook contains thirty-two previously unpublished contributions to consequentialist ethics by leading scholars, covering what's happening in the field today as well as pointing to new directions for future research. Consequentialism is a rival to such moral theories as deontology, contractualism, and virtue ethics. But it's more than just one rival among many, for every plausible moral theory must concede that the goodness of an act's consequences is something that matters even if it's not the only thing that matters. Thus, all plausible moral theories will accept both that the fact that an act would produce good consequences constitutes a moral reason to perform it and that the better that act's consequences the moral reason there is to perform it. Now, if this is correct, then much of the research concerning consequentialist ethics is important for ethics in general. For instance, one thing that consequentialist researchers have investigated is what sorts of consequences matter: the consequences that some act would have or the consequences that it could have-if, say, the agent were to follow up by performing some subsequent act. And it's reasonable to suppose that the answer to such questions will be relevant for normative ethics regardless of whether the goodness of consequences is the only thing matters (as consequentialists presume) or just one of many things that matter (as non-consequentialists presume)"--

Researching Private Supplementary Tutoring - Mark Bray 2016-03-01

Private supplementary tutoring, widely known as shadow education because of the way that it mimics mainstream schooling, has greatly expanded worldwide. It consumes considerable family resources, provides employment for tutors, occupies the time of students, and has a backwash on regular schools. Although such tutoring has become a major industry and a daily activity for students, tutors and families, the research literature has been slow to catch up with the phenomenon. The topic is in some respects difficult to research, precisely because it is shadowy. Contours are indistinct, and the actors may hesitate to share their experiences and perspectives. Presenting methodological lessons from diverse cultures, the book contains chapters from both high-income and low-income settings in Asia, Caribbean, Europe and the Middle East. Separately and together, the chapters present valuable insights into the design and conduct of research. The book will assist both consumers and producers of research. Consumers will become better judges of the strengths, weaknesses and orientations of literature on the theme; and producers will gain insights for design of instruments, collection of data, and interpretation of findings. The editors: Mark Bray is UNESCO Chair Professor in Comparative Education at the University of Hong Kong. Ora Kwo is an Associate Professor in the Comparative Education Research Centre at the University of Hong Kong. Boris Jokić is a Scientific Associate in the Centre for Educational Research and Development at the Institute for Social Research in Zagreb, Croatia.
