Renewable Energy Sources and Climate Change Mitigation - Ottmar Edenhofer 2012

This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six

most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers. Management 3.0 - Jurgen Appelo 2011

In many organizations, management is the biggest obstacle to successful Agile development. Unfortunately, reliable guidance on Agile management has been scarce indeed. Now, leading Agile manager Jurgen Appelo fills that gap, introducing a realistic approach to

leading, managing, and growing your Agile team or organization. Writing for current managers and developers moving into management, Appelo shares insights that are grounded in modern complex systems theory, reflecting the intense complexity of modern software development. Appelo's Management 3.0 model recognizes that today's organizations are living, networked systems; and that management is primarily about people and relationships. Management 3.0 doesn't offer mere checklists or prescriptions to follow slavishly; rather, it deepens your understanding of how organizations and Agile teams work and gives you tools to solve your own problems. Drawing on his extensive experience as an Agile manager, the author identifies the most important practices of Agile management and helps you improve each of them. Coverage includes • Getting beyond “Management 1.0” control and “Management 2.0” fads • Understanding how complexity affects your organization • Keeping

Shaping Our Selves - Erik Parens 2015

When bioethicists debate the ethics of using

technologies like surgery and pharmacology to shape our selves, they are debating what it means for human beings to flourish. They are debating what makes animals like us truly happy, and whether the technologies at issue will bring us closer to or farther from such happiness. The positions that participants adopt in debates regarding such ancient and fundamental questions are often polarized, and cannot help but be deeply personal. It is no wonder that these debates are sometimes acrimonious. How can critics of and enthusiasts about technological self- transformation move forward in the midst of polarizing arguments? Based on his experience as a scholar at The Hastings Center, the oldest free-standing bioethics research institute in the world, Erik Parens proposes a habit of thinking, which he calls Binocular thinking lets us benefit from the insights that are visible from the stance of the enthusiast, who emphasizes that using technology to creatively transform our selves

will make us happier, and to benefit from the insights that are visible from the stance of the critic, who emphasizes that learning to let ourselves be will make us happier. Because these debates ultimately entail critics and enthusiasts giving justifications for their own ways of being in the world, they entail the exchange of more than just impartial reasons. In the throes of our passion to make our case, we exaggerate our insights and all-too-often fall into the conceptual traps that our languages constantly set for us: Are human beings by nature creators or creatures? Are technologies morally neutral or value- laden? Is disability a medical or a social phenomenon? Indeed, are we free or determined? Parens explains how participating in these debates helped him articulate a habit of thinking, which is better at benefiting from the insights embedded in both poles of those binaries than was the habit of thinking he broug

Rosner 2015-07-29

Bernard Rosner's **FUNDAMENTALS OF BIOSTATISTICS** is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems. Most methods are illustrated with specific instructions as to implementation using software either from SAS, Stata, R, Excel or Minitab.
