Absolute Zero - Helen Cresswell 2005-03

When Uncle Parker wins a luxury holiday in a slogan competition, the rest of the Bagthorpes are determined that they can do better.

Suddenly there isn't an unfilled entry form to be found as they jauntily compose jingles, scribble slogans and fire out forms to the right, left and centre. Only Jack and his hapless hound Zero refuse to be swept up in the hysteria. After all,

everybody knows that they could never win anything. So how exactly does Zero find himself the most famous dog in England . . .? * Helen Cresswell has written over 40 much-loved books for children, as well as adapting stars such as The Demon Headmaster for television.

Absolute Zero (An Agent Zero Spy Thriller-Book #12) - Jack Mars 2021-10

"You will not sleep until you are finished with

AGENT ZERO. A superb job creating a set of characters who are fully developed and very much enjoyable. The description of the action scenes transport us into a reality that is almost like sitting in a movie theater with surround sound and 3D (it would make an incredible Hollywood movie). I can hardly wait for the sequel." --Roberto Mattos, Books and Movie Reviews ABSOLUTE ZERO is book #12-and the series finale-in the #1 bestselling AGENT ZERO series, which begins with AGENT ZERO (Book #1), a free download with over 500 five-star reviews. In the shocking series finale, Agent Zero learns of a powerful thermonuclear bomb which, set off in the right place, could kill tens of millions. In a breathtaking twist, he learns of something else that will make it even more deadly. The fate of the world is literally at stake as Agent Zero finds himself in a mad race against time, the only person on the planet with a capacity to find the weapon. Yet, while Zero races to find the location, he is up against other

formidable forces: dozens of assassins are dispatched to kill him. And in the midst of all this, the time has come for Zero to have a final reckoning with his own deteriorating health. Full circle from his original discovery of the memory chip, Agent Zero is given one last chance to save the planet-if only he can keep from destroying himself-and everything in his path-in his wake. Uniform Supersonic Flows In Chemical Physics: Chemistry Close To Absolute Zero Studied Using The Cresu Method - Bertrand

R Rowe 2022-05-18

Radioastronomy has painted an extraordinary picture of the Galactic interstellar medium, which displays an amazing organization and structuring of matter from very hot ultra-diluted media to very cold denser milieus considered as the cradles of stars. In these latter environments, the discovery of a chemical diversity of molecules, including those associated with precursors to life itself, immediately brought to light the question of the mechanisms leading to their formation and persistence at temperatures as low as 10 K. The chemical networks developed to understand telescope observations required a great deal of physical and chemical parameters relevant to interstellar conditions, particularly at very low

temperatures. These included the rate coefficients of thousands of gas phase chemical reactions. Such data were missing in the 1970s, when the very first molecular discoveries were made. Then, in the early eighties, it was realized that uniform supersonic flows were ideal chemical reactors to study reaction kinetics at interstellar temperatures. Uniform Supersonic Flows in Chemical Physics reviews 40 years of use of such reactors, the so-called CRESU machines, focusing on major breakthroughs brought to chemical physics, physical chemistry, astrophysics and astrochemistry by the various experiments carried out with such apparatuses. The wealth of kinetic data at very low temperatures provided new targets for the predictions of theory, with new theoretical methods being developed to explain observed behavior. The first two chapters describe the physical context of reaction kinetics at very low temperatures and the requirements needed to run optimally such uniform supersonic flows,

together with a historical perspective. Chapters 3 to 9 describe the various families of chemical processes that have been explored within the CRESU technique, highlighting major advances and offering an exhaustive up-to-date bibliography. Chapters 10 and 11 show how these experimental results have helped in improving the ideas in quantum chemistry and interstellar modeling. The book concludes with an overview of potential perspectives and new routes to be explored.

Absolute Zero - Chuck Logan 2009-10-13

On one of the coldest nights in Minnesota history, the difference between life and death is literally the blink of an eye for Phil Broker, until recently St. Paul's most successful undercover cop. That blink will convey the urgent warning of a comatose man who knows the dark truth binding Broker to a remarkable cast of characters -- a weary anesthesiologist, a brilliant surgeon, a wealthy novelist, his exwife (a reformed exotic dancer), and her unrepentant pimp. For Broker it all began when he agreed to take three big-city professionals on a canoeing trip across Minnesota's most remote lakes. One

of the three is horribly injured in a freak October blizzard, and Broker embarks on a white-knuckle rescue against time and the elements, ending with a writer in a coma and his accountant dead. Suspicious of foul play, Broker follows a twisted trail of manipulation and revenge that leads back to the writer's beautiful wife -- and a ring of men caught in a deadly competition for her affections. *Absolute Zero* is suspense writing at its finest, a novel whose surprising reversals and unexpectedly nuanced characters secure Chuck Logan's reputation as "one of the best of the . . . thriller breed" and blows the lid off Minnesota's best-kept literary secret.

[Ending Fossil Fuels](#) - Holly Jean Buck
2021-11-02

Ending the fossil fuel industry is the only credible path for climate policy. Around the world, countries and companies are setting net-zero carbon emissions targets. But what will it mean if those targets are achieved? One possibility is that fossil fuel companies will

continue to produce billions of tons of atmospheric CO₂ while relying on a symbiotic industry to scrub the air clean. Focusing on emissions draws our attention away from the real problem: the point of production. The fossil fuel industry must come to an end but will not depart willingly; governments must intervene. By embracing a politics of rural-urban coalitions and platform governance, climate advocates can build the political power needed to nationalize the fossil fuel industry and use its resources to draw carbon out of the atmosphere.

Zero Decibels - George Michelsen Foy
2010-05-18

Have our noise-soaked lives driven us mad? And is absolute silence an impossible goal—or the one thing that can save us? A lively tale of one man's quest to find the grail of total quiet.--- “ I don't know at what point noise became intolerable for me,” George Michelsen Foy writes as he recalls standing on a subway platform in Manhattan, hands clamped firmly

over his ears, face contorted in pain. But only then does Foy realize how overwhelmed he is by the city's noise and vow to seek out absolute silence, if such an absence of sound can be discovered. Foy begins his quest by carrying a pocket-sized decibel meter to measure sound levels in the areas he frequents most—the subway, the local café, different rooms of his apartment—as well as the places he visits that inform his search, including the Parisian catacombs, Joseph Pulitzer's "silent vault," the snowy expanses of the Berkshires, and a giant nickel mine in Canada, where he travels more than a mile underground to escape all human-made sound. Along the way, Foy experiments with noise-canceling headphones, floatation tanks, and silent meditation before he finally tackles a Minnesota laboratory's anechoic chamber that the Guinness Book of World Records calls "the quietest place on earth," and where no one has ever endured even forty-five minutes alone in its pitch-black interior before

finding the silence intolerable. Drawing on history, science, journalistic reportage, philosophy, religion, and personal memory, as well as conversations with experts in various fields whom he meets during his odyssey, Foy finds answers to his questions: How does one define silence? Did human beings ever experience silence in their early history? What is the relationship between noise and space? What are the implications of silence and our need for it—physically, mentally, emotionally, politically? Does absolute silence actually exist? If so, do we really want to hear it? And if we do hear it, what does it mean to us? According to the Environmental Protection Agency, 30 million Americans suffer from environment-related deafness in today's digital age of pervasive sound and sensory overload. Roughly the same number suffer from tinnitus, a condition, also environmentally related, that makes silence impossible in even the quietest places. In this respect, Foy's quest for silence represents more

than a simple psychological inquiry; both his queries and his findings help to answer the question "How can we live saner, healthier lives today?" Innovative, perceptive, and delightfully written, *Zero Decibels* will surely change how we perceive and appreciate the soundscape of our lives.

Modern Thermodynamics with Statistical Mechanics - Carl S. Helrich 2008-11-19

Thermodynamics is not the oldest of sciences. Mechanics can make that claim.

Thermodynamics is a product of some of the greatest scientific minds of the 19th and 20th centuries. But it is sufficiently established that most authors of new textbooks in thermodynamics find it necessary to justify their writing of yet another textbook. I find this an unnecessary exercise because of the centrality of thermodynamics as a science in physics, chemistry, biology, and medicine. I do acknowledge, however, that instruction in thermodynamics often leaves the student in a confused state. My attempt in this

book is to present thermodynamics in as simple and as unified a form as possible. As teachers we identify the failures of our own teachers and attempt to correct them. Although I personally acknowledge with a deep gratitude the appreciation for thermodynamics that I found as an undergraduate, I also realize that my teachers did not convey to me the sweeping grandeur of thermodynamics. Specifically the simplicity and the power that James Clerk Maxwell found in the methods of Gibbs were not part of my undergraduate experience. Unfortunately some modern authors also seem to miss this central theme, choosing instead to introduce the thermodynamic potentials as only useful functions at various points in the development.

Absolute Zero - Artem Chekh 2020-06-09

The book is a first person account of a soldier's journey, and is based on Artem Chekh's diary that he wrote while and after his service in the war in Donbas. One of the most important messages the book conveys is that war means

pain. Chekh is not showing the reader any heroic combat, focusing instead on the quiet, mundane, and harsh soldier's life. Chekh masterfully selects the most poignant details of this kind of life.

Ending Zero Tolerance - Derek W. Black
2016-09-13

Ending Zero Tolerance answers the calls of grassroots communities pressing for integration and increased education funding with a complete rethinking of school discipline. In the era of zero tolerance, we are flooded with stories about schools issuing draconian punishments for relatively innocent behavior. One student was suspended for chewing a Pop-Tart into the shape of a gun. Another was expelled for cursing on social media from home. Suspension and expulsion rates have doubled over the past three decades as zero tolerance policies have become the normal response to a host of minor infractions that extend well beyond just drugs and weapons. Students from all demographic

groups have suffered, but minority and special needs students have suffered the most. On average, middle and high schools suspend one out of four African American students at least once a year. The effects of these policies are devastating. Just one suspension in the ninth grade doubles the likelihood that a student will drop out. Fifty percent of students who drop out are subsequently unemployed. Eighty percent of prisoners are high school drop outs. The risks associated with suspension and expulsion are so high that, as a practical matter, they amount to educational death penalties, not behavioral correction tools. Most important, punitive discipline policies undermine the quality of education that innocent bystanders receive as well—the exact opposite of what schools intend. Derek Black, a former attorney with the Lawyers' Committee for Civil Rights Under Law, weaves stories about individual students, lessons from social science, and the outcomes of courts cases to unearth a shockingly irrational system

of punishment. While schools and legislatures have proven unable and unwilling to amend their failing policies, Ending Zero Tolerance argues for constitutional protections to check abuses in school discipline and lays out theories by which courts should re-engage to enforce students' rights and support broader reforms.

Sex, murder, cover-up...a lethal combination. Fourteen days until Sierra Hunt's brother is sentenced to life in prison for a crime he didn't commit and the cover-up is so outrageous it's almost unbelievable. Sierra had no way of

knowing that the man with whom she had an explosive one-night stand would hold the answer to her desperate need. Vic 'Eagle' Bodine wanted more than the unexpected one night with the woman who rocked his world. He was shocked when she turned out to be Galaxy's newest client, and that they'd be joined at the hip as they worked to save her brother from an unjust imprisonment. Galaxy will need to live up to its motto of We are your last resort for this one, the mother of all cover-ups. But Eagle is going to make damned sure that he gets it done...and at the same time convince Sierra that they belong together.

The Angel of Absolute Zero - Marjorie Stelmach 2022-04-29

Marjorie Stelmach's new collection, *The Angel of Absolute Zero*, seeks to engage its readers in thoughtful reflection on our difficult times. The opening section of the book, entitled *Canticle of*

Want, introduces the collection's governing characteristic: these poems want a lot. They ask us to view our damaged planet and acknowledge our complicity; to question "how it is we have come to this" and take heart in our wish to be more worthy; to accept suffering and loss and yet feel gratitude, expect joy. In short, these poems aspire to "teach us to number our days that we may gain a heart of wisdom."

#1 bestseller Jack Mars, readers are taken on an action thriller across Europe as presumed-CIA operative Kent Steele, hunted by terrorists, by the CIA, and by his own identity, must solve the mystery of who is after him, of the terrorists' pending target—and of the beautiful woman he keeps seeing in his mind. Kent Steele, 38, a brilliant professor of European History at Columbia University, lives a quiet life in a New York suburb with his two teenage daughters. All that changes when late one night he gets a knock on his door and is abducted by three terrorists—and finds himself flown across the ocean to be interrogated in a basement in Paris. They are convinced that Kent is the most lethal spy the CIA has ever known. He is convinced they have the wrong man. Do they? With a conspiracy around him, adversaries as smart as he is, and an assassin on his tail, the wild game of cat and mouse leads Kent on a perilous road—one that may lead back to Langley—and to a shocking discovery of his own identity. [Absolute Zero Cool](#) - Declan Burke 2014-08-27 Eine dreifach ausgezeichnete Krimi-Entdeckung aus Irland, wie Sie es noch nie gelesen haben! Billy Karlsson muss es einfach schaffen. Unbedingt. Der Krankenhausportier, der so ganz nebenbei ein bisschen Sterbehilfe betreibt, hängt als Figur in einem unvollendeten und unveröffentlichten Roman fest. Gefangen in dieser Vorhölle, geistig verwirrt und beinahe schon dem Wahnsinn nahe, muss er dringend etwas unternehmen, um endlich veröffentlicht zu werden. Denn wenn es schon nicht mehr genügt, alte Leute um die Ecke zu bringen, wird ihm

wohl nur noch eines übrigbleiben: das Krankenhaus in die Luft zu jagen. Nur sein Schöpfer, der Autor, kann ihn noch aufhalten... Absolute Zero Cool stellt alle Traditionen des Krimigenres auf den Kopf und begeistert und verstört in gleichem Maße. Der Roman ist ein witziger selbstreflexiver Angriff auf das Genre selbst, eine einfallsreiche Story über die Fähigkeit des menschlichen Geistes, nicht nur schöpferisch, sondern auch zerstörerisch zu sein. Der Roman wurde mit dem Goldsboro Crime Fest Last Laugh Award 2012 für den witzigsten Krimi ausgezeichnet, stand auf der Shortlist des Irish Book Award 2011 (Kategorie "Crime Novel of the Year") und zählte zu den Best Books of the Year der Sunday Times. *Absolute Zero (The Sector Wars, Book 1)* - Nicola Claire 2019-11-21 Introducing the crew of the Harpy: a ragtag group of spacers hauling cargo in the outer rim. keeps Captain Kael Jameson going. Plus the crew he's managed to gather in place of a family. But when he's forced to destroy something precious in order to save the ones he loves most, his world is turned upside down in a heartbeat. Things get bad after that, and he already had a hangover. Alien hitmen, political intrigue leading to civil war, and a cunning pirate overlord; you'd think it couldn't get any worse. But it does. When an unidentified enemy enters the known systems and starts picking New Earth's allies off, one by one, life as we know it falls apart. Either Kael and his crew beat them. Or get beaten. It's going to be a close call.

Zero - Charles Seife 2019-11-28

A NEW YORK TIMES NOTABLE BOOK The Babylonians invented it, the Greeks banned it, the Hindus worshipped it, and the Christian Church used it to fend off heretics. Today it's a timebomb ticking in the heart of astrophysics. For zero, infinity's twin, is not like other numbers. It is both nothing and everything. Zero

has pitted East against West and faith against reason, and its intransigence persists in the dark core of a black hole and the brilliant flash of the Big Bang. Today, zero lies at the heart of one of the biggest scientific controversies of all time: the quest for a theory of everything. Within the concept of zero lies a philosophical and scientific history of humanity. Charles Seife's elegant and witty account takes us from Aristotle to superstring theory by way of Egyptian geometry, Kabbalism, Einstein, the Chandrasekhar limit and Stephen Hawking. Covering centuries of thought, it is a concise tour of a world of ideas, bound up in the simple notion of nothing.

Absolute Knowledge - Drew Cordell

2016-12-26

It's amazing how significantly our lives can change in such a short amount of time. Whether it's a fateful meeting with an old friend, a chance encounter, or an epiphany that seems to materialize from thin air, the lifelong chain of events that follow forever set us on a different

path. My life changed in a matter of minutes. The choices I made led me to a life of crime and caused me to become the worst sort of criminal; I became a traitor to the country of New York. For better or worse, the path my life has taken is irreversible. I've killed, I've died, and I've risked my life in attempt to destroy a society built on over one hundred years of lies and corruption. Though I have regrets, I'm proud of the way I handled things. My name is Jacob Ashton, and this is my story. *Absolute Knowledge* is the first of a trilogy which takes place in a dark, futuristic New York City set in 2146. The country of New York is divided into three physical tiers and the faceless Government is working to establish *Absolute Knowledge*. Working as Thinkers, the citizens of the Slums are paid for their thoughts and given vouchers needed to sustain their cost of living. Since the Government controls almost everything, most citizens are forced to either work as Thinkers or turn to a life of disconnect from society under the harshest of conditions. In

Absolute Knowledge, every thought has a price. *Absolute Zero* - James Patterson 2017-06-01 James Patterson's BookShots. Short, fast-paced, high-impact entertainment. Fear the man who has nothing left to lose... Cody Thurston is working his usual shift at the rough East London pub he calls home. When a group of out-of-towners walk in looking for trouble, Thurston sends them on their way using some not-so-gentle persuasion. As a former special forces operative in the Australian military, Thurston can handle trouble. But these men are more dangerous than he realises, and the actions they take will leave Thurston homeless, alone and seeking revenge.

Cold Chemistry - Olivier Dullieu 2017-12-12
Explores the theoretical and experimental

aspects of cold and ultracold molecular collisions, for students and researchers in theoretical chemistry and chemical reaction/molecular dynamics.

Cold Chemistry - Olivier Dulieu 2017-12-06

Recent years have seen tremendous progress in research on cold and controlled molecular collisions, both in theory and in experiment. The advent of techniques to prepare cold and ultracold molecules and ions, to store them in optical lattices or in charged quasicrystalline structures, and to use them in crossed or merged beam experiments have opened many new possibilities to study the most fundamental aspects of molecular interactions. At the same time, theoretical work has made progress in tackling these problems and accurately describing quantum effects in complex systems, and in proposing viable options to control chemical reactions at ultralow energies. Through tutorials on both the theoretical and experimental aspects of research in cold and

ultracold molecular collisions, this book provides advanced undergraduate students, graduate students and researchers with the foundations needed to understand this exciting field.

The Page's Plea is a collection of poems and prose that answers the call of the blank page to be covered with words from the heart and soul. In this book you will find just that. I have compiled a collection of my poems on an array of subjects that I've experienced or have been inspired by during my short time on this planet called earth. I divided this collection into five chapters for your reading enjoyment. In reading The Page's Plea I hope that you are entertained and enlightened at the same time. Thank you for your time.

Absolute Zero and the Conquest of Cold - Tom Shachtman 2000-12-12

"A lovely, fascinating book, which brings science to life." —Alan Lightman Combining science, history, and adventure, Tom Shachtman "holds the reader's attention with the skill of a novelist" as he chronicles the story of humans' four-centuries-long quest to master the secrets of cold (Scientific American). "A disarming portrait of an exquisite, ferocious, world-ending extreme," Absolute Zero and the Conquest of Cold demonstrates how temperature science produced astonishing scientific insights and applications that have revolutionized civilization (Kirkus Reviews). It also illustrates how scientific advancement, fueled by fortuitous discoveries and the efforts of determined individuals, has allowed people to adapt to—and change—the environments in which they live and work, shaping man's very understanding of, and relationship, with the world. This "truly wonderful book" was adapted into an acclaimed documentary underwritten by the National Science Foundation and the Alfred P. Sloan

Foundation, directed by British Emmy Award winner David Dugan, and aired on the BBC and PBS's Nova in 2008 (Library Journal). "An absorbing account to chill out with." —Booklist **Nothing** - Jeremy Webb 2013

All too easily, we ignore or dismiss the fascinating possibilities of emptiness and non-existence. But without nothing, or rather what we've long taken to be nothing - we'd be nowhere. This title is suitable for those who are interested in science - or in the greatest mysteries of our world.

A Wrinkle in Time - Madeleine L'Engle
2019-07-18

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught

in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem.

Nothing - New Scientist, 2016-09-01

Zero, zip, nada, zilch. It's all too easy to ignore the fascinating possibilities of emptiness and non-existence, and we may well wonder what there is to say about nothing. But scientists have known for centuries that nothing is the key to understanding absolutely everything, from why particles have mass to the expansion of the universe; without nothing we'd be precisely nowhere. With chapters by 22 science writers, including top names such as Ian Stewart, Marcus Chown, Helen Pilcher, Nigel Henbest, Michael Brooks, Linda Geddes, Paul Davies, Jo Marchant and David Fisher, this fascinating and intriguing book revels in a subject that has tantalised the finest minds for centuries, and shows there's more to nothing than meets the eye.
