The General Data Dissemination System - International Monetary Fund 2007-07-25
The IMF's work on data dissemination standards consists of two tiers: the General Data Dissemination System (GDDS), which applies to all IMF member countries, and the Special Data Dissemination Standard (SDDS), for those members having or seeking access to international capital markets. The GDDS framework provide governments with guidance on the overall development of the macroeconomic, financial, and sociodemographic data that are essential for policymaking and analysis in an environment that increasingly requires relevant, comprehensive, and accurate statistical data. This Guide explains the nature, objectives, and operation of the GDDS; the data dimensions it covers; and how countries participate. It provides national statistical authorities with a management tool and a framework to foster sound statistical methodology, professional data

compilation, and data dissemination. The Guide supersedes the version updated in March 2002 and incorporates the UN Millennium Development Goals (MDGs) as specific elements of the GDDS sociodemographic component, which was articulated with the collaboration of the World Bank.

The Special Data Dissemination Standard - International Monetary Fund 2007-07-25
The Special Data Dissemination Standard (SDDS) was established by the IMF in 1996 to guide members that already had, or that might seek, access to international capital markets in providing key economic and financial data to the public. In the following year, the IMF

established the General Data Dissemination Standard (GDDS), which seeks to prepare countries for meeting the requirements of the SDDS. Data supplied by countries subscribing to the SDDS, as well as information provided by countries participating in the GDDS, are posted on the Dissemination Standards Bulletin Board (DSBB) on the IMF's public website (<http://dsbb.imf.org>). This Guide is intended to assist subscribers of the SDDS, GDDS participants moving toward subscription to the SDDS, and users of the DSBB in becoming aware of the features and scope of the SDDS and the DSBB. It is intended to further the IMF's initiatives in data transparency and standards, to enhance the public availability of timely and comprehensive international statistics, and therefore to contribute to countries pursuit of sound macroeconomic policies and to the improved functioning of global financial markets.

Music Description and Access - Jean Harden
2018-01-01

Music Description and Access: Solving the Puzzle of Cataloging is both a textbook for students and a handbook and reference source for practicing catalogers. The bulk of the book is a step-by-step guide to cataloging music materials, with dozens of examples showing images of published scores or audio recordings. Content and encoding are treated separately, using RDA and MARC21. Interspersed in the chapters on practical cataloging are short

Historical Asides, essays putting particular devices or conventions into context. These essays supplement a chapter on cataloging history, which follows an introductory chapter that sets the stage for the task at hand. The book ends with a chapter by Maristella Feustle on describing and providing access to music special collections, using both archival and rare-music-cataloging standards. Aids in navigating the book include an index plus multiple lists and tables. A bibliography and a list of cataloging tools that are available online are also given.
