The Pilgrim, first published in 1969, has been hailed as Indonesia's first real modern novel. The main characters are an artist and a cemetery overseer; the former represents emotion and the latter signifies reason and the conflicting aspects of human nature. Despite the characters' antagonistic nature and cruelty, they are---in some ways---very similar. Both represents forms of creativity, philosophy, and art. Both exist outside conventional society. Both are searching for genuine human values and are aware of their shortcomings. In The Pilgrim, the chaos of thought and feelings represents life in its chaotic randomness.

Criminal Futures - Simon Egbert 2020-12-15
This book explores how predictive policing transforms police work. Police departments around the world have started to use data-driven applications to produce crime forecasts and intervene into the future through targeted prevention measures. Based on three years of field research in Germany and Switzerland, this book provides a theoretically sophisticated and empirically detailed account of how the police produce and act upon criminal futures as part of their everyday work practices. The authors argue that predictive policing must not be analyzed as an isolated technological artifact, but as part of a larger sociotechnical system that is embedded in organizational structures and occupational cultures. The book highlights how, for crime prediction software to come to matter and play a role in more efficient and targeted police work, several translation processes are needed to align human and nonhuman actors across different divisions of police work. Police work is a key function for the production and maintenance of public order, but it can also discriminate, exclude, and violate civil liberties and human rights. When criminal futures come into being in the form of algorithmically produced risk estimates, this can have wide-ranging consequences. Building on empirical findings, the book presents a number of practical recommendations for the prudent use of algorithmic analysis tools in police work that will speak to the protection of civil liberties and human rights as much as they will speak to the professional needs of police organizations. An accessible and compelling read, this book will appeal to students and scholars of criminology, sociology, and cultural studies as well as to police practitioners and civil liberties advocates, in addition to all those who are interested in how to implement reasonable forms of data-driven policing.

Cycling and Society - Dave Horton 2016-05-13

How can the social sciences help us to understand the past, present and potential futures of cycling? This timely international and interdisciplinary collection addresses this question, discussing shifts in cycling practices and attitudes, and opening up important critical spaces for thinking about the prospects for cycling. The book brings together, for the first time, analyses of cycling from a wide range of disciplinary backgrounds, including history, sociology, geography, planning, engineering and technology. The book redresses the past neglect of cycling as a topic for sustained analysis by treating it as a varied and complex practice which matters greatly to contemporary social, cultural and political theory and action. Cycling and Society demonstrates the incredible diversity of contemporary cycling, both within and across cultures. With cycling increasingly promoted as a solution to numerous social problems across a wide range of policy areas in car-dominated societies, this book helps to open up a new field of cycling studies.

Applications For Enrollment of Choctaw Newborn Act of 1905 Volume XIV - Jeff Bowen 2020-09-24
The Applications for Enrollment of Choctaw Newborn, Act of 1905, National Archive film M-1301, Rolls 50-57, are found under the heading of Applications for Enrollment of the Commission to the Five Civilized Tribes. These applications contain considerably more information than stated on the census cards found in series M-1186. Series M-1301 possesses its own numerical sequence, separate from M-1186. To find each party's roll number researchers must reference M-1186. The governing 1905 statute (H.R. 17474) defined Choctaw Newborn as "infant children born prior to September twenty-fifth, nineteen hundred and two, and who were living on said date, to citizens by blood of the Choctaw . . ." It also authorized the Department of the Interior to enroll and make allotments to such children based on applications received on their behalf no later than May 2, 1905. The Choctaw--as well as the Chickasaw allotments--were likely some of the most sought after properties in Indian Territory. There was supposed to be a 25-year restriction on the sale or lease of any Indian lands so as to ensure that the owners wouldn't be swindled; however, the presence of huge asphalt and coal deposits in both the Choctaw and Chickasaw Districts elicited pressure from private interests to purchase the lands. On April 26, 1906, President Roosevelt signed the Five Tribes Bill removing some of the restrictions from the sale of all inherited land but continuing to prohibit full-bloods from selling their land for

25 years. Mr. Bowen's faithful transcriptions of the Choctaw applications provide the names of the applicants and their relatives, as well as the identities of doctors, lawyers, midwives, and others.

Vortical Flows Research Program of the Fluid Dynamics Research Branch - National Aeronautics and Space Administration (NASA) 2018-07-24
The research interests of the staff of the Fluid Dynamics Research Branch in the general area of vortex flows are summarized. A major factor in the development of enchanced maneuverability and reduced drag by aerodynamic means is the use of effective vortex control devices. The key to control is the use of

emerging computational tools for predicting viscous fluid flow in close coordination with fundamental experiments. In fact, the extremely complex flow fields resulting from numerical solutions to boundary value problems based on the Navier-Stokes equations requires an intimate relationship between computation and experiment. The field of vortex flows is important in so many practical areas that a concerted effort in this area is justified. A brief background of the research activity undertaken is presented, including a proposed classification of the research areas. The classification makes a distinction between issues related to vortex formation and structure, and work on vortex interactions and evolution. Examples of current research results are provided, along with references where available. Based upon the current status of research and planning, speculation on future research directions of the group is also given. It will cover the features of Visual Studio 2010 through an application. It will go through a lot of the exciting new language features and new versions of the most popular technologies without putting the emphasis on the technologies themselves. If you are expecting this book to thoroughly cover the new Entity Framework or ASP.NET MVC 2, this is not the book for you. If you want to read a book where the focus is on Visual Studio 2010 and on the reasons for moving to Visual Studio 2010, this is the book for you.
