2018 Joint Trauma System (JTS) Clinical Practice Guidelines (CPGs) & DOD TRAUMA REGISTRY DATA DICTIONARY For Military and Civilian Health Care Practitioners - 2018-10-09

Almost 1,000 total pages; see index at beginning of publications for a complete list of included CPGs. Each CPG includes a section on the following: 1. GOAL 2. BACKGROUND 3. EVALUATION 4. TREATMENT 5. PERFORMANCE IMPROVEMENT (PI) MONITORING 6. SYSTEM REPORTING & FREQUENCY 7. RESPONSIBILITIES & 8. REFERENCES. OVERVIEW Clinical Practice Guidelines (CPGs) are the backbone of the system-wide JTS Performance Improvement program. Health data abstracted from patient records and after action reports is analyzed and distilled into globally relevant CPGs to remove medical practice variations and prevent needless deaths. The CPGs compiled from DoDTR data and used by healthcare providers worldwide are largely responsible for the decreased Case Fatality Rate for the wars in Iraq and Afghanistan. Examples are better transfusion practices; reduced burn morbidity and mortality; near elimination of extremity compartment syndrome; better patient care documentation; and improved communication across the spectrum of care between geographically dispersed facilities. CPGs are evidence-based and developed with experts in the military and civilian communities, deployed clinicians, Service trauma/surgical consultants, JTS leadership and formerly deployed Trauma Directors and Coordinators. JTS has a formalized process for developing, reviewing, updating, and approving CPGs. The guidelines are developed and implemented by clinical subject matter experts in response to needs identified in the military area of responsibility. CPGs were developed originally for U.S. Central Command. However, collaborative efforts are ongoing with the other Combatant Commands to customize CPGs to their COCOMs. INTRODUCTION TO THE JOINT TRAUMA SYSTEM (JTS) The Joint Trauma System (JTS) is the Department of Defense (DoD) authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006, the JTS implemented programs for data -driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry - known as the DoD Trauma Registry (DoDTR) - has documented demographic, injury, treatment, and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during on-going military operations, and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror (GWOt) when the need to systematically improve

trauma care for combat wounded resulted in the impromptu creation of a demonstration registry, known then as the Combat Trauma Registry (CTR). The CTR was constructed by the Center for AMEDD Strategic Studies (CASS); trauma-related information was initially abstracted into it from paper medical records received from trauma nurse coordinators (TNCs) at Landstuhl Regional Medical Center (LRMC) in Germany. Shortly after the demonstration program started, the Army Surgeon General approved its transition to an operational mode, leading to the formation of the Joint Theater Trauma System (JTTS) and, eventually, the Joint Trauma System (JTS).

Essentials of Trauma Anesthesia - Albert J. Varon 2017-11-09

Covering the most important topics in trauma anesthesia, this updated edition provides anesthesiology trainees and practitioners with a practical basis for managing trauma patients. Many recent advances in trauma care are identified, including paradigm shifts in the management of bleeding and coagulopathy, new neuromuscular blockade and anticoagulant reversal drugs, and updated clinical practice guidelines. This volume provides a concise, practical review of the essential elements in the care of the severely injured trauma patient, including emergency airway management, fluid and blood resuscitation, monitoring, coagulation therapy, regional and general anesthesia, and perioperative care. Edited by two of the most experienced trauma anesthesiologists in the United States, with chapters written by experts from leading US and Canadian trauma centers with the highest and most varied caseload of critically injured patients, *Essentials of Trauma Anesthesia* identifies new trends in surgery and anesthesiology practices that impact on the management of trauma patients.

Three-Dimensional Cephalometry - Gwen R.J. Swennen 2005-12-10

Radiographic cephalometry has been one of the most important diagnostic tools in orthodontics, since its introduction in the early 1930s by Broadbent in the United States and Hofrath in Germany. Generations of orthodontists have relied on the interpretation of these three dimensions with the aid of 3D-cephalometry images for their diagnosis and treatment planning. Of course, at the moment the technique is not available well as for the long-term follow-up of growth and in every orthodontic case around the corner. H-treatment results. Also in the planning for surgical orthodontic corrections of jaw discrepancies, lateral cephalograms have been valuable tools. For these purposes numerous cephalometric analyses are available. However, a major drawback of the existing technique is that it renders only a two-dimensional representation of a three-dimensional structure.

Trauma Anesthesia - Charles E. Smith 2015-04-09

Trauma patients present a unique challenge to anesthesiologists, since they require resource-intensive care, often complicated by pre-existing medical conditions. This fully revised new edition focuses on a broad spectrum of traumatic injuries and the procedures anesthesiologists perform to care for trauma

patients perioperatively, surgically, and post-operatively. Special emphasis is given to assessment and treatment of co-existing disease, including surgical management of trauma patients with head, spine, orthopaedic, cardiac, and burn injuries. Topics such as training for trauma (including use of simulation) and hypothermia in trauma are also covered. Six brand new chapters address pre-hospital and ED trauma management, imaging in trauma, surgical issues in head trauma and in abdominal trauma, anesthesia for oral and maxillofacial trauma, and prevention of injuries. The text is enhanced with numerous tables and 300 illustrations showcasing techniques of airway management, shock resuscitation, echocardiography and use of ultrasound for the performance of regional anesthesia in trauma.

IAP Textbook of Pediatric & Neonatal Emergencies - Santosh T Soans FIAP 2019-08-31

Optimal Resources for Surgical Quality and Safety - David B. Hoyt 2017-07-21

Hurt - Catherine Muesebeck, MD 2016-09-06

Trauma is a disease of epidemic proportions that preys on the young, killing more Americans up to age thirty-seven than all other afflictions combined. Every year an estimated 2.8 million people are hospitalized for injuries and more than 180,000 people die. We take for granted that no matter how or where we are injured, someone will call 911 and trained first responders will show up to insert IVs, stop the bleeding, and swiftly deliver us to a hospital staffed by doctors and nurses with the expertise necessary to save our lives. None of this happened on its own. Told through the eyes of a surgeon who has flown on rescue helicopters, resuscitated patients in trauma centers in Houston and Chicago, and operated on hundreds of trauma victims of all ages, *Hurt* takes us on a tour of the advancements in injury treatment from the battlefields of the Civil War to the state-of-the-art trauma centers of today.

Trauma Care Pre-Hospital Manual - Ian Greaves 2018-12-07

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

Trauma Team Dynamics - Lawrence M. Gillman 2015-11-02

This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation -from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

Critical Care Obstetrics for the Obstetrician and Gynecologist, An Issue of Obstetrics and Gynecology Clinics of North America, E-Book - Carolyn M. Zelop 2016-11-07

Despite advances in medical technology and patient safety initiatives, maternal morbidity and mortality rates continue to increase. Maternal mortality trends in the US as reported from the CDC from 1989-2009 demonstrate increasing mortality trends from 7.2 deaths per 100,000 live births in 1987 to 17.8 deaths per 100,000 live births in 2009. To combat this problem, a thorough understanding of the critical medical and

surgical issues that are often encountered in pregnancy is essential. Each article addresses a topic relevant to care of the critically ill gravida.

AACN Procedure Manual for High Acuity, Progressive, and Critical Care - E-Book - AACN

2016-12-02

The AACN Procedure Manual for High Acuity, Progressive, and Critical Care, 7th Edition, authored by the American Association of Critical-Care Nurses, is the authoritative reference to procedures performed in high acuity, progressive, and critical care settings. It visually guides you through procedures unique to the adult critical care environment, including those performed by advanced practice nurses, in an illustrated, step-by-step format. This edition features 17 new procedures, new illustrations, and updated content throughout, reflecting the latest evidence-based guidelines and national and international protocols. Authored by the American Association of Critical-Care Nurses, the foremost authority in critical care nursing, the AACN Procedure Manual is the most authoritative reference to procedures performed by nurses in high acuity, progressive, and critical care settings. Comprehensive coverage includes all procedures commonly performed by nurses in high acuity, progressive, and critical care settings, including those performed by advanced practice nurses (indicated by an AP icon). A straightforward step-by-step organization uses consistent headings to make following a procedure (and finding the various supporting elements) quick and easy. Rationales for all interventions in patient and family education, assessment, patient preparation, procedure, and monitoring help you understand the reason for every step. The level of evidence is provided when an evidence base exists to substantiate an intervention, giving insight into the strength of information available. Advanced practice procedures are clearly identified with an AP icon so you can judge whether a procedure is within your scope of practice. Alphabetical Procedure Index inside the front cover provides quick access to the procedures. Written by more than 100 expert critical care nurses and extensively reviewed by more than 100 experts in critical care nursing to ensure the accuracy and currency of each procedure. Bulleted lists, tables, and detailed illustrations throughout ensure that content is easy to reference and digest. NEW! Updated content throughout reflects the latest evidence-based guidelines and national and international protocols. NEW! 17 new procedures reflect major additions to nursing practice in high acuity, progressive, and critical care settings. NEW! Pediatric Trauma - David E. Wesson 2017-05-18

Injuries cause more than half of all childhood deaths and a large proportion of pediatric trauma care is provided by non-pediatric specialists. This book provides an update of current practice, backed by evidence-based recommendations, in four sections: 1) Trauma systems for children, including epidemiology, organization of pediatric trauma care, disaster planning and systems for mass pediatric casualties and community injury prevention programs. 2) General principles of resuscitation and supportive care. 3) Specific injuries commonly seen in children, including from child abuse. 4) Rehabilitation, communication, long-term outcomes and performance improvement methods to monitor outcomes.
