The emerging economy requires the support of a reliable, affordable, and energy system with low carbon emissions and air pollutants. System design is important in facilitating sustainable development. Various works that aspire to promote sustainable system design by addressing the issues of enhancing energy and environmental performance were presented in the Special Issue (SI) of the 22nd Conference on Process Integration, Modelling and Optimisation for Energy Saving and Pollution Reduction (PRES'19). The contribution can be categorised into four topics focused on modelling, simulation, optimisation, and assessment studies, on the topics of: (a) heat integration and heat transfer, (b) integrated and newly developed heat exchangers, (c) integration of renewables (d) roles in economic and environmental sustainability. Aha! Solutions - Martin Erickson 2009-01-22
Every mathematician (beginner, amateur, and professional alike) thrills to find simple, elegant solutions to seemingly difficult problems. Such happy resolutions are called "aha! solutions," a phrase popularized by mathematics and science writer Martin Gardner. Aha! solutions are surprising, stunning, and scintillating: they reveal the beauty of mathematics. This book is a collection of problems with aha! solutions. The problems are at the level of the college mathematics student, but there should be something of interest for the high school student, the teacher of mathematics, the "math fan," and anyone else who loves mathematical challenges. This collection includes one hundred problems in the areas of arithmetic, geometry, algebra, calculus, probability, number theory, and combinatorics. The problems start out easy and generally get more difficult as you progress through the book. A few solutions require the use of a computer. An important feature of the book is the bonus discussion of related mathematics that follows the solution of each problem. This material is there to entertain and inform you or point you to new questions. If you don't remember a mathematical definition or concept, there is a Toolkit in the back of the book that will help.

Breeding the Racehorse - Federico Tesio 1999
There is no book - there can be no book - that will infallibly point the way to successful bloodstock breeding. Yet in the General Stud Book, the sport of horse racing has produced a genetic record extending over more than two centuries and a score of generations that contains an ordered store of facts about the hereditary qualities of one living species - data that no scientific body possesses. Here is the recorded experience of the man who, above all others of our time, has deciphered the riddle of its manifold pages: Federico Tesio. Tesio and

Nearco and Ribot are the names of the greatest breeder, the outstanding sire, and the most consistent winner of the twentieth century, and perhaps of all time. The astonishing and prolonged success of the Italian stud at Dormello was the result not merely of an encyclopaedic knowledge of recorded facts about equine dynasties and the history of the thoroughbred

but of wide practical experience in all parts of the world and acute, sustained and minute observation of the characteristics of particular horses and bloodlines. The essence of Tesio's philosophy and something of his genius has been distilled into this gem of a book.
