**Concepts of Biology** - Samantha Fowler  
2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences

and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**Biology** - Eric J. Simon 2015-11  
For non-majors/mixed biology courses. Build a flexible non-majors biology course with science literacy at its core. Eric Simon's Biology: The Core combines a succinct, beautifully illustrated 12-chapter textbook with engaging MasteringBiology assignment options and extensive instructor support materials. The Core

The modular organization of the text makes it easy for instructors to teach concepts in their preferred order, and powerful online assignment options reinforce those concepts by clarifying the "big picture" and preparing your students with the biological literacy skills required to make informed decisions outside the classroom. The Second Edition text and MasteringBiology assignment options further revolutionize teaching in and out of the classroom with a greater emphasis on the nature of science and dozens of new opportunities for students to practice basic science literacy skills. The Core's concise modules continue to focus students' attention on the most important concepts, combining dynamic figures and illustrations with supporting narrative as the primary source of

instruction to create a more engaging and accessible learning experience for students. The new edition has been revised to strengthen the ways the text, MasteringBiology, and the instructor support materials work together in meeting the needs of both instructors and students-before, during, and after class. A Better Ape - Victor Kumar 2022

"A Better Ape explores the evolution of the moral mind from our ancestors with chimpanzees, through the origins of our genus and our species, to the development of behaviorally modern humans who underwent revolutions in agriculture, urbanization, and industrial technology. The book begins, in Part I, by explaining the biological evolution of sympathy and loyalty in great apes and trust and respect in the earliest humans. These moral emotions are the first element of the moral mind. Part II explains the gene-culture co-evolution of norms, emotions, and reasoning in Homo sapiens. Moral norms of harm, kinship, reciprocity, autonomy, and fairness are the second element of the moral

mind. A social capacity for interactive moral reasoning is the third element. Part III of the book explains the cultural co-evolution of social institutions and morality. Family, religious, military, political, and economic institutions expanded small bands into large tribes and created more intense social hierarchies through new moral norms of authority and purity. Finally, Part IV explains the rational and cultural evolution of moral progress and moral regress as human societies experienced gains and losses in inclusivity and equality. Moral progress against racism, homophobia, speciesism, sexism, classism, and global injustice depends on integration of privileged and oppressed people in physical space, social roles, and democratic decision making. The central idea in the book is that all these major evolutionary transitions, from ancestral apes to modern societies, and now human survival of climate change, depend on co-evolution between morality, knowledge, and complex social structure"--

*Molecular Pathology* - William B. Coleman  
2017-11-09

As the molecular basis of human disease becomes better characterized, and the

implications for understanding the molecular basis of disease becomes realized through improved diagnostics and treatment, *Molecular Pathology, Second Edition* stands out as the most comprehensive textbook where molecular mechanisms represent the focus. It is uniquely concerned with the molecular basis of major human diseases and disease processes, presented in the context of traditional pathology, with implications for translational molecular medicine. The Second Edition of *Molecular Pathology* has been thoroughly updated to reflect seven years of exponential changes in the fields of genetics, molecular, and cell biology which molecular pathology translates in the practice of molecular medicine. The textbook is intended to serve as a multi-use textbook that would be appropriate as a classroom teaching tool for biomedical graduate students, medical students, allied health students, and others (such as advanced undergraduates). Further, this textbook will be valuable for pathology

residents and other postdoctoral fellows that desire to advance their understanding of molecular mechanisms of disease beyond what they learned in medical/graduate school. In addition, this textbook is useful as a reference book for practicing basic scientists and physician scientists that perform disease-related basic science and translational research, who require a ready information resource on the molecular basis of various human diseases and disease states.
