The Promise of Adolescence

- National Academies of Sciences, Engineering, and Medicine 2019-07-26

Adolescenceâ€"beginning with the onset of puberty and ending in the mid-20sâ€"is a critical period of development during which key areas of the brain mature and develop.

These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a

period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescenceâ€"rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge

can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.

CPC Exam Questions (300 Questions with Full Answer Key and Rationale) - The

Coders Choice LLC 2018-02-27

The CPC exam is comprised of 150 multiple-choice questions.

The test takes five hours and 40 minutes to complete,

making it fairly rigorous. There are two breaks in the middle of the test.

The CPC exam costs \$300 to take, but only \$260 if the test-taker is a member of the AAPC (annual dues are \$125 for individuals and \$70 for students).

The CPC exam thoroughly tests a coder's grasp of the entire coding process, from medical terminology to code sets and beyond.

Per the AAPC's website, the CPC exam covers 24 subject areas, including anesthesia, radiology, and medicine.

You should recognize a number of these (like Evaluation and Management,

or Radiology) as sections of the CPT code manual. Others, like Anatomy and Physiology, are parts of the coder's everyday skill set.

You should note that the questions on the exam are not divided or identified by the topic they are related to. That is, questions on the CPC exam will test you on all of the above 24 fields of medical coding, but they won't outright say, "This is an anesthesia question."

Instead they'll just ask you about anesthesia, or surgery, or human anatomy. During the test, you'll be presented with a number of tests cases pertaining to the practice of coding. These test case questions will present you with a condensed medical report and ask you to select the correct set of codes from the answers below.

For instance, a test case question might read: "Sarah, a 45-year-old patient, visits the doctor and presents symptoms including a sore throat, swollen lymph nodes, and a fever. After performing a rapid strep test, the doctor confirms a diagnosis of streptococcal sore throat.

The doctor prescribes an Amoxicillin as an antibiotic. Which of the following are the correct codes for this diagnosis, procedure and prescription?"There are also general knowledge questions, like "Which types of joints are synovial?" that don't have an attached test case. That question's related to the musculoskeletal system, but the test won't come right out and say so. You'll have to rely on your knowledge of code sets, medical terminology, best practices, and the coding process in general to pass. Individuals who earn a score of 70 percent or better (105 correct questions) will pass the CPC exam. If you fail your first test, you are allowed one free retake. GETTING CERTIFIED Once you pass the CPC exam, you are not officially certified by the AAPC until you fulfill a few other criteria. In order to complete a CPC certification, you must become a member of the AAPC. Certification is also limited to coders with two years of professional experience or

those willing to complete an apprentice program. As such, the CPC exam is recommended for individuals who have already started their coding career. That won't prevent us from going over the basics of this important exam.

location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to

cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Developing and Maintaining Emergency Operations Plans: Comprehensive Preparedness Guide (CPG) 101, Version 2.0 - U. s. Department of Homeland Security 2013-01-23

Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to

planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an

analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common

understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with

the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.
