Handbook of Research on Methodologies for Design and Production Practices in Interior Architecture - Garip, Ervin 2020-11-20

Studio environments can be defined as multi-dimensional integrated production spaces where basic design trainings take place and where design issues including theoretical notions such as sociological, political, phenomenological, and other dimensions are discussed. Present approaches within the literature and social media on this topic gives cause for students to evaluate their future professions over finished and pictorial products rather than ontological and processual means. While there are many resources available on the present approaches of aesthetics and visuality of interior spaces, there is not much research available on new design methodologies, related design processes, and new applied methods in interior arcitecture. Based on different contexts, these methods of design practice have the potential to enrich design processes and create multiple discussion platforms within project studios as well as other design media. These different representations and narration methods for research in the context of interior architecture can be effectively used in design processes. The Handbook of Research on Methodologies for Design and Production Practices in Interior Architecture proposes new design methodologies and related design processes and introduces new applied method approaches while presenting alternative methods that have been used within design studios in the field of interior architecture. The chapters deal with four

major sections: the design process and interdisciplinay approaches; then scenario development and content; followed by material, texture, and atmosphere; and concluding with new approaches to design. While highlighting topics such as spatial perception, design strategies, architectural atmosphere, and design-thinking, this book is of interest to architects, interior designers, practitioners, stakeholders, researchers, academicians, and students looking for advanced research on the new design metholodologies and processes for interior architecture.

Design Studio Vol. 3: Designs on History - Jonathan Hill 2021-11-01

Each architectural design is a new history. To identify what is novel or innovative, we need to consider the present, past and future. We expect historical narratives to be written in words, but they can also be delineated in drawing, cast in concrete or seeded in soil. The aim of this volume is to understand each design as a visible and physical history. Historical understanding is investigated as a stimulus to the creative process, highlighting how architects learn from each other and other disciplines. This encourages us to consider the stories about history that architects fabricate. An eminent set of international contributors reflect

on the relevance of historical insight for contemporary design, drawing on the rich visual output of innovative studios worldwide in practice and education. Wide ranging and thought-provoking articles encompass fact, fiction, memory, time, etymology, civilisation, racial segregation and more. Features: Elizabeth Dow, Pezo von Ellrichshausen, Terunobu Fujimori, Perry Kulper, Lesley Lokko, Yeoryia Manolopoulou, Niall McLaughlin, Aisling O'Carroll, Arinjoy Sen, Amin Taha and Sumayya Vally.

Crit - An Architectural Student's Handbook - Charles Doidge
2007-08-15

The architectural crit, review or jury is a cornerstone of architectural education around the world. Students defend their ideas, drawings, and models in open forum before staff and fellow students. What academic staff see as healthy creative debate, students see as hostile confrontation, an ego-trip for staff and humiliation for them. This accessible and readable book, written by students and illustrated by telling cartoons, guides them through this academic minefield with creative humour. It provides practical advice based on experience of many recent students and draws on recent experimentation at Sheffield University and De Montfort University Leicester. The aim is twofold: first to suggest how to get the most out of the traditional experience and second, to describe ways in which this is being developed into an experience that will be more constructive and prepare future students to build more creative relationships with clients and users, and across the industry. While much has been written about the crit, review, or jury, little has been done to prepare students for it or to develop it in the light of changing professional attitudes and relationships. This book is a timely guide to a timeless experience in a changing profession.

Changing Trends in Architectural Design Education - Jamal Al-Qawasmi 2006

During the last three decades or so there has been a substantial shift in architectural design education. These changes have manifested in an increased criticism of the traditional design education; attempts to reconsider/rethink the basic assumptions, theories and practices of

traditional design education; and calls for major changes in studio culture. The drivers of this change include epistemological, social, and economical forces among which are new knowledge and technological developments; increased use of computers and information technology in design education and practice; pressure on institutions of higher education to reduce space use; and changing student demographics. Forty five authors from all over the world come together to address new discourse in architectural design education. The 45 articles of the book are organized under nine themes: virtual and distributed design education, digital design education, digital visualization and design teaching, reflections on architectural design education, integration of studio with other teaching, theoretical issues in learning and teaching design, creativity & critical thinking, alternative studio/design built studio, and teaching studio.
