Comprising 91 A-Z entries, this encyclopedia provides a broad and comprehensive introduction to the topic of

religion within film. • Presents 91 A-Z entries that illuminate topics of geographic and regional interest, biographic data, categories common in the study of religion, and examinations of specific films or film-related events •

Contains contributions from a remarkable group of distinguished, well-published authorities and younger scholars, all with relevant backgrounds in religion, film, culture, or multiple areas of expertise • Includes images of important film directors as well

as film stills • Provides selected bibliographic information regarding the intersection of religion and film that supplements the "for further reading" section of each entry • Offers an indexed filmography of works noted throughout the encyclopedia, providing significant information about each film, such as year released, director, and major actors

Enlightened Animals in Eighteenth-Century Art - Sarah Cohen 2021-02-11

How do our senses help us to understand the world? This question, which preoccupied Enlightenment thinkers, also emerged as a key theme in depictions of animals in eighteenth-century art. This book examines the ways in which painters such as Chardin, as well as sculptors, porcelain modelers, and other decorative designers portrayed animals as sensing subjects who physically confirmed the value of material experience. The sensual style known today as the Rococo encouraged the proliferation of animals as

exemplars of empirical inquiry, ranging from the popular subject of the monkey artist to the alchemical wonders of the life-sized porcelain animals created for the Saxon court.

Examining writings on sensory knowledge by La Mettrie, Condillac, Diderot and other philosophers side by side with depictions of the animal in art, Cohen argues that artists promoted the animal as a sensory subject while also validating the material basis of their own professional practice.

Bangkok Babylon - Jerry Hopkins 2011-04-11

In the colorful tradition of Orwell and Hemingway, Maugham and Theroux, Jerry Hopkins recalls his first decade as a Bangkok expatriate by profiling twenty-five of the city's most unforgettable characters. Among them are the man thought to be the model for Colonel Kurtz in *Apocalypse Now*, an advertising executive who photographs Thai bargirls for

Playboy, an Oscar-winning screenwriter who moved there to die, a Catholic priest who has lived and worked in the Bangkok slums for 35 years, a circus dwarf turned computer programmer turned restaurateur, three Vietnam war helicopter pilots who opened a go-go bar, a pianist at one of the world's best hotels who ended up on the FBI's 10 Most Wanted list, a gem dealer who smuggles antiquities from Burma and Cambodia, a detective who tracks runaways who fake their deaths, and a documentary filmmaker who lives with elephants. All of them "escaped" to Thailand to re-invent themselves and live out their fantasies in one of the world's most notorious cities.

Foundations for Designing User-Centered Systems -

Frank E. Ritter 2014-04-11
Foundations for Designing User-Centered Systems introduces the fundamental human capabilities and characteristics that influence how people use interactive technologies. Organized into four main

areas—anthropometrics, behaviour, cognition and social factors—it covers basic research and considers the practical implications of that research on system design. Applying what you learn from this book will help you to design interactive systems that are more usable, more useful and more effective. The authors have deliberately developed Foundations for Designing User-Centered Systems to appeal to system designers and developers, as well as to students who are taking courses in system design and HCI. The book reflects the authors' backgrounds in computer science, cognitive science, psychology and human factors. The material in the book is based on their collective experience which adds up to almost 90 years of working in academia and both with, and within, industry; covering domains that include aviation, consumer Internet, defense, eCommerce, enterprise system design, health care, and industrial process control.

Eating the IT Elephant -
Richard Hopkins 2008-04-29
A Practical, Start-to-Finish
Approach to Managing,
Evolving, and Transforming
Legacy IT Systems For every IT
executive, manager, architect,
program leader, project leader,
and lead analyst “Richard and
Kevin introduce us to a reality
that’s often neglected in our
industry: the problem of
evolving legacy systems, a
domain they call ‘Brownfield
development.’ The authors
identify the root of the problem
as that of complexity, and offer
an approach that focuses on
the fundamentals of
abstraction and efficient
communication to nibble at this
problem of transformation bit
by bit. As the old saying goes,
the way you eat the elephant is
one bite at a time. Richard and
Kevin bring us to the table with
knife and fork and other tools,
and show us a way to devour
this elephant in the room.”
Grady Booch, IBM Fellow, co-
creator of UML “Most

organizations in the 21st
century have an existing,
complex systems landscape. It
is time that the IT industry face
up to the reality of the situation
and the need for new
development methods and tools
that address it. This book
describes a new approach to
the development of future
systems: a structured approach
that recognizes the challenges
of ‘Brownfield’ development, is
based on engineering
principles, and is supported by
appropriate tooling.” Chris
Winter, CEng CITP FBCS FIET,
IBM Fellow, Member of the
IBM Academy of Technology
Most conventional approaches
to IT development assume that
you’re building entirely new
systems. Today, “Greenfield”
development is a rarity. Nearly
every project exists in the
context of existing, complex

most experienced senior
architects offer a new
approach that is fully optimized
for the unique realities of
“Brownfield” development.

Richard Hopkins and Kevin Jenkins explain why accumulated business and IT complexity is the root cause of large-scale project failure and show how to overcome that complexity "one bite of the elephant at a time." You'll learn how to manage every phase of the Brownfield project, leveraging breakthrough collaboration, communication, and visualization tools--including Web 2.0, semantic software engineering, model-driven development and architecture, and even virtual worlds. This book will help you reengineer new flexibility and agility into your IT environment...integrate more effectively with partners...prepare for emerging business challenges... improve system reuse and value...reduce project failure rates...meet any business or IT challenge that requires the evolution or transformation of legacy systems. · System complexity: understand it, and harness it Go beyond the comforting illusion of your high-level

architecture diagrams · How conventional development techniques actually make things worse Why traditional decomposition and abstraction don't work--and what to do instead · Reliably reengineer your IT in line with your business priorities New ways to understand, communicate, visualize, collaborate, and solve complex IT problems · Cut the elephant down to size, one step at a time Master all four phases of a Brownfield project: survey, engineer, accept, and deploy

Eating Apes - Dale Peterson
2003-05

The author of *Storyville, U.S.A.* confronts the growing threat to the great apes, including humankind's closest relatives--chimpanzees, bonobos, and gorillas--posed by widespread game hunting in Africa.

- Radu Calinescu 2012-10-12
This book presents the thoroughly refereed and revised post-workshop proceedings of the 17th Monterey Workshop, held in Oxford, UK, in March 2012. The workshop explored the challenges associated with the Development, Operation and Management of Large-Scale complex IT Systems. The 21 revised full papers presented were significantly extended and improved by the insights gained from the productive and lively discussions at the workshop, and the feedback from the post-workshop peer reviews.

Strange Foods - Jerry Hopkins 1999-11-15

This gastrological romp shares

tales of gustatory tidbits from six continents. Weaving history and autobiography, author Jerry Hopkins regales with an array of startling facts about the world's eating habits. *Strange Foods* begins with rat tales from the Roman Empire and imperial China and continues on to stories from locales where rat remains a mouth-watering hors d'oeuvre or hearty entrée today. There are at least 40 serving suggestions for crocodile alone! And there are more than 250 photographs from acclaimed photographer Michael Freeman, whose aim is true and who eats what he shoots. This is gonzo food writing that's sure to change your mind, if not your palate.

Getting Started with Data Science - Murtaza Haider 2015-12-14

Master Data Analytics Hands-On by Solving Fascinating Problems You'll Actually Enjoy! Harvard Business Review recently called data science "The Sexiest Job of the 21st Century." It's not just sexy: For millions of managers, analysts,

and students who need to solve real business problems, it's indispensable. Unfortunately, there's been nothing easy about learning data science—until now. *Getting Started with Data Science* takes its inspiration from worldwide best-sellers like *Freakonomics* and Malcolm Gladwell's *Outliers*: It teaches through a powerful narrative packed with unforgettable stories. Murtaza Haider offers informative, jargon-free coverage of basic theory and technique, backed with plenty of vivid examples and hands-on practice opportunities. Everything's software and platform agnostic, so you can learn data science whether you work with R, Stata, SPSS, or SAS. Best of all, Haider teaches a crucial skillset most data science books ignore: how to tell powerful stories using graphics and tables. Every chapter is built around real research challenges, so you'll always know why you're doing what you're doing. You'll master data science by answering fascinating

questions, such as: • Are religious individuals more or less likely to have extramarital affairs? • Do attractive professors get better teaching evaluations? • Does the higher price of cigarettes deter smoking? • What determines housing prices more: lot size or the number of bedrooms? • How do teenagers and older people differ in the way they use social media? • Who is more likely to use online dating services? • Why do some purchase iPhones and others Blackberry devices? • Does the presence of children influence a family's spending on alcohol? For each problem, you'll walk through defining your question and the answers you'll need; exploring how others have approached similar challenges; selecting your data and methods; generating your statistics; organizing your report; and telling your story. Throughout, the focus is squarely on what matters most: transforming data into insights that are clear, accurate, and can be acted upon.

If You Were an Elephant -

Leslie Staub 2021-07-20

A charming and exuberant nonfiction picture book about a young elephant's day on the savanna with her herd. If you were an elephant, you'd be the biggest animal who lives on the land. You'd have ears big as tent flaps, skin thick as blankets. You'd turn the next page with your trunk, not your hand. Chock-full of amazing facts, this joyful read aloud invites readers to follow in the (enormous) footsteps of one of the world's most remarkable creatures--from munching on bushes and branches all day, to splashing around in water holes and mud baths, to finally curling up with the herd in a pool of moonlight. Kids will love every moment of this playful introduction to the daily sights, sounds, and activities of a young elephant in the wild.

Why Dogs Hump and Bees Get Depressed - Marc Bekoff
2013-11-01

In 2009, Marc Bekoff was asked to write on animal emotions for *Psychology Today*. Some 500 popular, jargon-free essays later, the field of anthrozoology — the study of human-animal relationships — has grown exponentially, as have scientific data showing how smart and emotional nonhuman animals are. Here Bekoff offers selected essays that showcase the fascinating cognitive abilities of other

animals as well as their empathy, compassion, grief, humor, joy, and love. Humpback whales protect gray whales from orca attacks, combat dogs and other animals suffer from PTSD, and chickens, rats, and mice display empathy. This collection is both an updated sequel to Bekoff's popular book *The Emotional Lives of Animals* and a call to begin the important work of "rewilding" ourselves and changing the way we treat other animals.

Articulating the Elephant

Man - Peter W. Graham 1992

The surgeon Frederick Treves and the anthropologist Ashley Montagu helped make him famous. Filmmaker David Lynch and playwright Bernard Pomerance made him a star. According to the popular press, singer Michael Jackson wanted to buy his bones from London Hospital. Stories about Joseph Merrick--the "Elephant Man" of Victorian England--combine elements of myth and fable, tragedy and melodrama, freak show and farce. And they seem to have perennial appeal. In

Articulating the Elephant Man, Peter W. Graham and Fritz H. Oehlschlaeger examine how the phenomenon called "the Elephant Man" has been constructed and reconstructed--how Joseph Merrick has been transformed from a suffering individual into an exhibit, a shape-shifting curiosity whose different guises variously suit the needs of particular audiences, genres, and interpreters. Merrick's "presenters" have been a varied group of artists, medical experts, scholars, and biographers. But preceding them all is Merrick himself, no mere passive sufferer but an individual who bravely endured--and, when he had to, successfully exploited--his outrageous bodily disorder. According to Graham and Oehlschlaeger, each account--starting with Merrick's autobiographical pamphlet--blends description and creation, observation and self-revelation, and the selective recording, alteration, and suppression of details. Telling the story of the Elephant Man,

whether as a drama, a film, a sequence of poems, or a medical case study, often reveals as much about the observer as it does about the subject. The Victorians' accounts of Merrick, for example, reflect that era's tendency to normalize the extraordinary, to colonize the exotic. For them, Merrick was both an ideal object of charity and a challenge to their most basic assumptions about humanity. In our own time, Merrick is cast as the ultimate outsider. If it was culturally convenient for the Victorians to patronize Merrick and congratulate his "benefactors," contemporary cultural biases make it easier for us to admire him as a subversive hero and to debunk his "exploiters." Like the hero of a folk tale, the real Merrick suffered indignities but enjoyed a dramatic change of fortune. At the end of his life, he had attained a measure of comfort, a small portion of fame, and the courteous notice of the eminent, the beautiful, even the royal. At the heart of his story, the authors suggest,

is Merrick's humanity--and telling his story helps us define our own. Merrick faced what every human being who grows old or falls ill must endure, the sufferer's painful questions about cause and effect, about personal guilt or cosmic cruelty. He knew the isolation felt by every outsider--the poor, the homeless, the victimized, even the modern "superstar." And, like each of us, he must have wondered if appearance is, after all, a misleading mask.

Agile Software Architecture

- Richard Hopkins 2013-11-27

This chapter looks at the delivery of large, complex system development projects that typically require the development and integration of multiple systems and the coordination of hundreds of individuals. We argue that

traditional agile development techniques that persuade against the use of architectures and processes can fail or provide suboptimal delivery in such situations. It is argued that elements of software, infrastructure, and data architecture are necessary prerequisites for the successful delivery of complex agile system development projects. The chapter suggests that these architectural elements should be identified in each project via a risk-based approach. These resulting architecture elements can then be used by a distributed low-cost delivery organization to reduce rework within the agile software development process and accelerate delivery by maximizing the overall delivery pipeline. The chapter argues that this agile architecting technique successfully enables the low-cost and low-risk delivery of complex agile system development projects.

of popular cinema of Hollywood and beyond and responds to the transformative effect of cultural studies on film studies. The contributors rethink contemporary film culture using ideas and concerns from feminism, queer theory, 'race' studies, critiques of nationalism, colonialism and post-colonialism, the cultural economies of fandom, spectator theory, and Marxism. Combining a film studies focus on the film industry, production and technology with a cultural studies analysis of consumption and audiences, *Keframes* demonstrates the breadth of approaches now available for understanding popular cinema. Subjects addressed include: * Studying Ripley and the 'Alien' films * Pedagogy and Political Correctness in Martial Arts cinema * Judy Garland fandom on the net * Stardom and serial fantasies: Thomas Harris's 'Hannibal' * Tom Hanks and the globalization of stars * Queer Bollywood * Jackie Chan and the Black connection * '12 Monkeys', postmodernism and urban space.

Knots - Richard Hopkins 2003

Since the first hunters tied a piece of fint to a stick, knots have been integral to human development. Today, we use knots on a daily basis, from tying our shoelaces to tying up packages, and while most people can get away with knowing how to tie only the most basic knots, expanding your knotting skills can be both useful and fun. If you enjoy outdoor recreation, then knowing how to tie a good knot is essential - and could be lifesaving. This useful and satisfying skill can be practiced anywhere and at any time with just a length of cord. This book will give you a basic knowledge of the knots you need for camping, climbing, fishing, and boating, as well as a good selection for general use. Learn how to fix a fishing hook to a line, lash up a bundle of tent poles, keep the boat from drifting away while you go ashore, rig an emergency mast, and what to do with your shoelaces when you're hanging over a cliff. Specially commissioned step-by-step artwork alongside the author's

instructions demonstrates clearly how to tie 100 different knots, while a short introduction to each knot tells exactly what it can be used for.

Análise de Negócios e o conjunto de tarefas e técnicas utilizadas para servir como ligação entre as partes interessadas, no intuito de compreender a estrutura, políticas e operações de uma organização e para recomendar soluções que permitam que a organização alcance suas metas. Análise de Negócios envolve compreender como as organizações funcionam e alcançam seus propósitos, e definir as capacidades que uma organização deve possuir para prover produtos e serviços para as partes interessadas externas. Isso

inclui a definição de metas organizacionais, como essas metas se conectam a objetivos específicos, a identificação das ações que uma organização deve executar para alcançar essas metas e objetivos, e a definição de como interagem as diversas unidades organizacionais e as partes interessadas, dentro e fora daquela organização. O Guia para o Corpo de Conhecimento de Análise de Negócios (Guia BABOK(r)) contém a descrição de práticas geralmente aceitas no campo da análise de negócios. O conteúdo incluído nesta versão foi verificado através de revisões feitas por praticantes, pesquisas entre a comunidade de análise de negócios e consultas junto a renomados especialistas neste campo. A versão em português foi revisada por especialistas em análise de negócios para garantir a melhor forma de expressar os conceitos com a utilização dos termos mais comuns ao mercado brasileiro, mas sem perder o sentido original da versão em inglês. Electric Animal - Akira

Mizuta Lippit 2000

Differentiation from animals helped to establish the notion of a human being, but the disappearance of animals now threatens that identity. This is the argument underlying *Electric Animal*, a probing exploration of the figure of the animal in modern culture. Akira Mizuta Lippit shows us the animal as a crucial figure in

the definition of modernity -- essential to developments in the natural sciences and technology, radical transformations in modern philosophy and literature, and the advent of psychoanalysis and the cinema. Moving beyond the dialectical framework that has traditionally bound animal and human being, *Electric Animal* raises a series of questions regarding the idea of animality in Western thought. Can animals communicate? Do they have consciousness? Are they aware of death? By tracing questions such as these through a wide range of texts by writers ranging from Friedrich Nietzsche to Jacques Derrida, Sigmund Freud to Vicki Heame, Lewis Carroll to Franz Kafka, and Sergei Eisenstein to Gilles Deleuze, Lippit arrives at a remarkable thesis, revealing an extraordinary logical consensus in Western thought: animals do not have language and hence cannot die. The animal has, accordingly, haunted thought as a form of spectral and

undead being. Lippit demonstrates how, in the late nineteenth century; this phantasmic concept of animal being reached the proportions of an epistemological crisis, engendering the disciplines and media of psychoanalysis, modern literature, and cinema, among others. Against the prohibitive logic of Western philosophy, these fields opened a space for rethinking animality. Technology, usually thought of in opposition to nature, came to serve as therepository for an unmournable animality -- a kind of vast wildlife museum. A highly original work that charts new territory in current debates over language and mortality, subjectivity and technology, *Electric Animal* brings to light fundamental questions about the status of representation -- of the animal and of ourselves -- in the age of biomechanical reproduction.

Geekonomics - David Rice
2007-11-29

The Real Cost of Insecure Software • In 1996, software defects in a Boeing 757 caused

a crash that killed 70 people...

• In 2003, a software vulnerability helped cause the largest U.S. power outage in decades... • In 2004, known software weaknesses let a hacker invade T-Mobile, capturing everything from passwords to Paris Hilton's photos... • In 2005, 23,900 Toyota Priuses were recalled for software errors that could cause the cars to shut down at highway speeds... • In 2006 dubbed "The Year of Cybercrime," 7,000 software vulnerabilities were discovered that hackers could use to access private information... • In 2007, operatives in two nations brazenly exploited software vulnerabilities to cripple the infrastructure and steal trade secrets from other sovereign nations... Software has become crucial to the very survival of civilization. But badly written, insecure software is hurting people--and costing businesses and individuals billions of dollars every year. This must change. In *Geekonomics*, David Rice shows how we can change it.

Rice reveals why the software industry is rewarded for carelessness, and how we can revamp the industry's incentives to get the reliability and security we desperately need and deserve. You'll discover why the software industry still has shockingly little accountability—and what we must do to fix that.

Brilliantly written, utterly compelling, and thoroughly realistic, *Geekonomics* is a long-overdue call to arms. Whether you're software user, decision maker, employee, or business owner this book will change your life...or even save it.

The Process of Software Architecting - Peter Eeles
2009-07-14

A Comprehensive Process for Defining Software Architectures That Work A good software architecture is the foundation of any successful software system. Effective architecting requires a clear understanding of organizational roles, artifacts, activities performed, and the optimal sequence for performing those activities. With *The Process of Software Architecting*, Peter Eeles and Peter Cripps provide guidance

on these challenges by covering all aspects of architecting a software system, introducing best-practice techniques that apply in every environment, whether based on Java EE, Microsoft .NET, or other technologies. Eeles and Cripps first illuminate concepts related to software architecture, including architecture documentation and reusable assets. Next, they present an accessible, task-focused guided tour through a typical project, focusing on the architect's role, with common issues illuminated and addressed throughout. Finally, they conclude with a set of best practices that can be applied to today's most complex systems. You will come away from this book understanding The role of the architect in a typical software development project How to document a software architecture to satisfy the needs of different stakeholders The applicability of reusable assets in the process of architecting The role of the architect with respect to requirements definition The
