**Concepts of Biology** - Samantha Fowler  
2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge,

tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of

Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**Improving Adolescent Literacy** - Douglas Fisher 2019-01-02

Straightforward, affordable, and practical, *Improving Adolescent Literacy* gives all middle and secondary school teachers instructional routines that will allow them to develop the content literacy skills of their students. Chapter-opening vignettes from actual classrooms show readers effective teaching in action and give them a look at how the chapter's instructional approach works within content area teaching. Research-based rationales for each strategy follow the vignettes and provide an in-depth look at how to implement the strategy, along with examples of each strategy across the curriculum.

In this 5th Edition, the authors provide new classroom examples from their colleagues across the disciplines as well as new instructional routines that have been researched and validated since the publication of the last edition. Also, this edition has been re-organized, adding three new chapters, to focus on the ways in which teachers can use reading, writing, speaking, and listening in their classes, emphasizing reading and comprehending texts, creating graphic organizers, developing vocabulary knowledge, and writing to learn.

*Biology for NGSS Student Workbook* - Tracey Greenwood 2014-01-10

Biology for NGSS is an entirely new resource, and has been developed in consultation with practising teachers in the USA. It has been specifically written to meet the high school life science requirements (HSLS) of the Next Generation Science Standards (NGSS). The three dimensions of the standards are integrated throughout the workbook: The Disciplinary Core Ideas (DCIs) provide the structural framework for the workbook, dividing it into four sections. Each chapter provides activities to specifically address the performance expectations arising from the DCIs. Science and Engineering Practices are supported throughout with activities to develop skills in analyzing and

interpreting data, developing and using models, and constructing explanations from evidence. A supporting introductory chapter provides students with additional opportunities to practice the mathematical and inquiry-based skills required at this level. Crosscutting concepts are identified throughout, allowing students to make connections between core ideas in different topics.

Traditions & Encounters - Jerry H. Bentley 2020

"This is History Book. It explored the grand scheme of world history as a product of real-life human beings pursuing their individual and

collective interests. It also offered a global perspective on the past by focusing on both the distinctive characteristics of individual societies and the connections that have linked the fortunes of different societies. It has combined a clear chronological framework with the twin themes of traditions and encounters, which help to make the unwieldy story of world history both more manageable and more engaging. From the beginning, Traditions & Encounters offered an inclusive vision of the global past—one that is meaningful and appropriate for the interdependent world of contemporary times"—
