Airline Maintenance Resource Management - J C Taylor 1998-09-25

This book is a primer about the leading-edge approach to maintenance operations known as Maintenance Resource Management (MRM) - a partnership of manager, doer and regulator. MRM programs at several leading carriers are reducing maintenance errors and improving the professional caliber of mechanics and managers. Although communication and coordination issues have only recently been considered as important as technological advances in the aviation community, airlines have realized that a fix exists for maintenance communications problems. The "bottom-up" technique of MRM has successfully addressed these problems through more effective sharing of information among all employees. In addition to describing the best practices now taking hold in the aviation industry, Taylor and Christensen look at what lies ahead and what the industry will need to do to match the high performance work systems in the best high-tech industries around the world.

Air Crash Investigations - Hans Griffioen 2011-02-01

This book explains the accident involving Atlantic Southeast Airlines flight 529, an EMB-120RT airplane, which lost a propeller blade and crashed near Carrollton, Georgia, on August 21, 1995. The accident killed 8 people on board. Safety issues in the report focused on manufacturer engineering practices, propeller blade maintenance repair, propeller testing and inspection procedures, the relaying of emergency information by air traffic controllers, crew resource management training, and the design of crash axes carried in aircraft.

Recommendations concerning these issues were made to the Federal Aviation Administration.
