The Final Film of Laurel and Hardy - Norbert Aping
2014-01-10
The remarkable story behind the planning, development and marketing of Laurel and Hardy's ill-received final film, Atoll K, has been little

explored. Details on the script development, cast, crew, locations, and even basic information on running times and release dates have been sketchy at best since the film's 1951 release. This work reconstructs the circumstances surrounding this unusual international co-production (Atoll K was a French-Italian film with English-speaking stars). Through lost documents detailing the film's production and funding, previously unreleased behind-the-scenes photos, and a rare interview with French movie star Suzy Delair, the author explores the continuous changes to the film's script during its chaotic production and the final marketing of the film's many different versions (Atoll K was also released as Robinson Crusoland in the United Kingdom and as Utopia in the United States). Several appendices detail alternative sequences and cut scenes in various versions of the film and include French box-office reports from 1951 to 1952 as well as a complete filmography.

Pain Management and the Opioid Epidemic - National Academies of Sciences, Engineering, and Medicine
2017-09-28

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from

the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Patient voices in Britain, 1840-1948 - Anne Hanley
2021-09-07

Historians have long engaged with Roy Porter's call for

histories that incorporate patients' voices and experiences. But despite concerted methodological efforts, there has simply not been the degree and breadth of innovation that Porter envisaged. Patients' voices still often remain obscured. This has resulted in part from assumptions about the limitations of archives, many of which are formed of institutional records written from the perspective of health professionals. Patient voices in Britain repositions patient experiences at the centre of healthcare history, using new types of sources and reading familiar sources in new ways. Focusing on military medicine, Poor Law medicine, disability, psychiatry and sexual health, this collection encourages historians to tackle the ethical challenges of using archival material and to think more carefully about how their work might speak to persistent health inequalities and challenges in health-service delivery.

Handbook of Healthcare Operations Management -

Brian T. Denton 2013-02-28
From the Preface: Collectively, the chapters in this book address application domains including inpatient and outpatient services, public health networks, supply chain management, and resource constrained settings in developing countries. Many of the chapters provide specific examples or case studies illustrating the applications of operations research methods across the globe, including Africa, Australia, Belgium, Canada, the United Kingdom, and the United States. Theoretical Nursing - Afaf

Ibrahim Meleis 2011

"An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about

theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--Provided by publisher.
