Fire and Rescue Service operational guidance - incidents in tunnels and underground structures - Great Britain: Department for Communities and Local Government 2012-04-27
This publication presents a framework for a safe system of

work for operations at incidents involving tunnels and underground structures. It provides a robust yet flexible insight that can be adapted to the nature, scale and requirements of the incident. Incidents involving tunnels and underground structures may place significant demands on local fire and rescue services and have often required a national co-ordinated response from across the country. This

type of incident may generate intense media attention where the operations of the emergency services are rigorously scrutinised. Whilst much of this attention is approving it will invariably focus on the preparedness of the emergency services and their operational effectiveness.

Fire Dynamics for Firefighters -

Fire and Rescue Service manual - Great Britain. Fire Service Inspectorate
2007-03-07

Incidents involving rescue from road vehicles are dramatically increasing in frequency. There are some 3500 deaths on the road each year, with 35,000 serious injuries. Modern motor vehicles are becoming safer for occupants, due to advancement in technology, so persons are more likely to survive high impact speeds, but are also more likely to become entrapped. The Fire and Rescue Service, as the primary rescue service, requires national guidance to ensure a similar standard of response anywhere in the UK. This manual is designed to highlight current best practice with regard to vehicle rescue techniques and first responder trauma care. Each chapter forms an independent reference source, but the

publication as a whole forms a complete guide. Chapters cover: vehicle design and construction; dealing with incidents; safety procedures; operational procedures; extrication equipment; medical considerations and trauma care; Integrated Personal Development System (I.P.D.S.). Appendices cover: Highways Agency/Fire and Rescue Service memorandum of understanding; training and general information; and emergency services personnel (ESP) aide m emoire. The CD-ROM, "Vehicle extrication techniques", is a multi media guide to rescue tool handling and extrication techniques.

All students of human factors - however seasoned - will also find it an invaluable and thought-provoking read.

Aircraft incidents - Great Britain: Department for Communities and Local Government 2012-02-02
The Fire and Rescue Service Operational Guidance - Aircraft Incidents provides a consistent approach that forms the basis for common operational practices. It supports interoperability between fire and rescue services, other emergency responders, the aviation industry and other groups. This guidance covers a wide range of incident types that Fire and Rescue Services are likely to encounter in relation to aircraft. It is applicable to any event regardless of scale, from small incidents, such as an accident

involving a microlight, to a large incident involving a civil aircraft (e.g. Airbus A380) resulting in a large scale major incident. It covers the time period from the receipt of the first emergency call to the closure of the incident by the Fire and Rescue Service Incident Commander. Whilst this guidance may be of use to a number of other agencies, it is mainly for the UK Fire and Rescue Service. In addition to detailed tactical and technical information it also outlines the key operational and strategic responsibilities and considerations that need to be taken into account to enable the Fire and Rescue Service to train, test intervention strategies and plan to ensure effective response at an aircraft incident

Brucellosis of Swine - A. B. Crawford 1948

Fire service manual - Great Britain: H.M. Fire Service Inspectorate 2003-09-01
Training for firefighters must be planned so that they experience reasonably realistic situations in which they encounter the hazards likely to be met in operational incidents, whilst the risk of resultant injury is controlled and all unnecessary risks avoided. One hazard is that of high environmental temperature, which can present an acute risk of burn injury (eg through contact with hot debris) and a less acute risk of physiological heat stress; it is this latter risk which is addressed in this document. The guidance is based on a study of environmental temperatures during training sessions, together with the resultant body temperatures of those taking part. Measures outlined include: pre-exposure procedures; monitoring and control procedures during

training; post-exposure control. An appendix describes the effects of heat on the body and heat-related disorders.

Unit Leader Assessments of a Joint Readiness Training Center Rotation - Tracye D. Julien 1990

Trauma Care Pre-Hospital Manual - Ian Greaves 2018-12-07

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of

trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.
