[Dying in America](#) - Institute of Medicine 2015-03-19

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and

respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

Geriatric Palliative Care - R. Sean Morrison 2003-05-08

Geriatric Palliative Care covers a broad spectrum of issues characterizing care near the end of life for older adults. Beginning with the social and cultural context of old age and frailty, this volume details specific aspects of palliative care relevant to particular disorders (e.g. cancer, strokes, dementia, etc.) as well as individual symptoms (e.g., pain, fatigue, anxiety, etc.). Communication between care-givers and patients, in a variety of settings, is also discussed. The theme of this book is that palliative care is the best approach to the care of chronically ill and frail elderly because of its focus on: quality of life; support for functional independence; and the centrality of the patient's values and experiences in determining the goals of medical care. Indeed, Geriatric Palliative Care provides a comprehensive medical reference for all clinicians who care for older adults.

When Children Die - Institute of Medicine 2003-01-09

The death of a child is a special sorrow. No matter the circumstances, a child's death is a life-altering experience. Except for the child who dies suddenly and without forewarning, physicians, nurses, and other medical personnel usually play a central role in the lives of children who die and their families. At best, these professionals will exemplify "medicine with a heart." At worst, families' encounters with the health care system will leave them with enduring painful memories, anger, and regrets. When Children Die examines what we know about the needs of these children and their families, the extent to which such needs are "and are not" being met, and what can be done to provide more competent, compassionate, and consistent care. The book offers recommendations for involving child patients in treatment decisions, communicating with parents, strengthening the organization and delivery of services, developing support programs for bereaved families, improving public and private insurance, training health professionals, and more. It argues that taking these steps will improve the care of children who survive as well as those who do not "and will likewise help all families who suffer with their seriously ill or injured child. Featuring illustrative case histories, the book discusses patterns of childhood death and explores the basic elements of physical, emotional, spiritual, and practical care for children and families experiencing a child's life-threatening illness or injury.

A Virtue-Based Defense of Perinatal Hospice - Aaron D. Cobb 2019-08-28

Perinatal hospice is a novel form of care for an unborn child who has been diagnosed with a significantly life-limiting condition. In this book, Aaron D. Cobb develops a virtue-based defense of the value of perinatal hospice. He characterizes its promotion and provision as a common project of individuals, local communities, and institutions working together to provide exemplary care. Engaging with important themes from the work of Alasdair MacIntyre and Robert Adams, he shows how perinatal hospice manifests virtues crucial to meeting the needs of families in these difficult circumstances. As a work of applied virtue ethics, this book has important normative, social, and political implications for the creation and development of structured programs of care. It grounds the view that communities ought (i) to devote resources to ensure that these programs are widely available and (ii) to develop social structures that promote awareness of and accessibility to these forms of care. *A Virtue-Based Defense of Perinatal Hospice* will be of interest to philosophers working in bioethics and applied virtue ethics, as well as scholars in the fields of neonatology, nursing, palliative and hospice care, and counseling who are interested in the study of perinatal hospice.

Connecting Care for Patients - Barbara Katz 2018-10-28

Connecting Care for Patients: Interdisciplinary Care Transitions and Collaboration addresses practical strategies for creating connected, seamless, and transparent health care for patients in settings outside of the hospital. It presents antidotes to healthcare fragmentation caused by inefficient care, patient safety problems, patient dissatisfaction, and higher costs. The text focuses on clinical case management, interdisciplinary referrals and conferencing, cross functional team meetings, tracking patients in value-based purchasing programs, inpatient liaison visits, structured collaboration with physician groups, and referral sources and development of clinical community networking groups. Further, it explores tools for patient self-management support, effective integration of technology, family caregiver engagement, and techniques for addressing health disparities and other high-risk care gaps.

Fast Facts for the Hospice Nurse - Patricia Moyle Wright, PhD, CRNP, ACNS-BC 2017-01-28

An on-the-go reference for hospice nurses and those interested in end-of-life care, this practical guide covers the essential elements in the compassionate and holistic care of terminally ill patients and their families. Nurses care for patients facing end-of-life issues in every practice specialty and, as the U.S. population continues to age, the need for proficiency in end-of-life skills will become increasingly important. *Fast Facts for the Hospice Nurse: A Concise Guide to End-of-Life Care* is an invaluable resource that provides emotional, administrative, and palliative support, whether in a hospice, long-term care facility, or acute care setting. This vital go-to text clearly and concisely lays out not only how to care for patients facing end-of-life issues, but also how to engage in self-care and cope with occupational stress. Beginning with an overview of hospice care, including its history and philosophy, this book offers a timeline of the growth of the hospice movement in the United States. Subsequent sections include up-to-date information on the clinical responsibilities of the hospice nurse in addressing the physical, psychological, and spiritual needs of terminally ill patients and their families in a culturally sensitive way. This book also outlines the administrative duties of the hospice nurse, including hospice documentation, a review of hospice regulations, and quality management. The closing section focuses on occupational stress in hospice nursing and how to engage in self-care. This text can serve as a useful clinical resource and also as a reference for nurses seeking hospice certification from the Hospice and Palliative Credentialing Center. Key Features Organized within the context of the scope and standards of practice of the Hospice and Palliative Nurses Association. Addresses key points about issues unique to hospice nursing and highlights evidence-based interventions Addresses important Medicare regulations and reimbursement Offers numerous clinical resources to assist with hospice nursing practice Serves as a concise study resource for hospice nursing certification

Essential Practices in Hospice and Palliative Medicine - Joseph W. Shega 2017-07-15

DC: 0-5 - Zero to Three 2016

DC:05 captures new findings relevant to diagnosis in young children and addresses unresolved issues in the

field since DC:03R was published in 2005. DC:05 is designed to help mental health and other professionals: ¢¢ recognize mental health and developmental challenges in infants and young children, through 5 years old; ¢¢ understand that relationships and psychosocial stressors contribute to mental health and developmental disorders and incorporate contextual factors into the diagnostic process; ¢¢ use diagnostic criteria effectively for classification, case formulation, and intervention; and ¢¢ facilitate research on mental health disorders in infants and young children.

Improving Palliative Care for Cancer - National Research Council 2001-10-19

In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. *Improving Palliative Care for Cancer* examines the barriers—scientific, policy, and social—that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.

Post-Acute and Long-Term Medicine - Pamela A. Fenstemacher 2015-12-12

This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community

care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of residents in post-acute and long-term care settings.
