**The Oxford Handbook of the Historical Books of the Hebrew Bible** - Brad E. Kelle 2020

"The Oxford Handbook of the Historical Books of the Hebrew Bible offers 36 essays on the so-called "Historical Books": Joshua, Judges, 1-2 Samuel, 1-2 Kings, Ezra-Nehemiah, and 1-2 Chronicles. The essays are organized around four nodes: contexts, content, approaches, and reception. Each essay takes up two questions: (1) what does the topic/area/issue have to do with the Historical Books?" and (2) how does this topic/area/issue help readers better interpret the Historical Books?" The essays engage traditional theories and newer updates to the same, and also engage the textual traditions themselves which are what give rise to compositional analyses. Many essays model approaches that move in entirely different ways altogether, however, whether those are by attending to synchronic, literary, theoretical, or reception aspects of the texts at hand. The contributions range from text-critical issues to ancient historiography, state formation and development, ancient Near Eastern contexts, society and economy, political theory, violence studies, orality, feminism, postcolonialism, and trauma theory—among others. Taken together, these essays well represent the variety of options available when it comes to gathering, assessing, and interpreting these particular biblical books"--

**Cain's Jawbone** - Edward Powys Powys Mathers 2021-04-27

Six murders. One hundred pages. Millions of possible combinations... but only one is correct. Can you solve Torquemada's murder mystery? In 1934, the Observer's cryptic crossword compiler, Edward Powys Mathers (aka Torquemada), released a novel that was simultaneously a murder mystery and the most fiendishly difficult literary puzzle ever written. The pages have been printed in an entirely haphazard order, but it is possible - through logic and intelligent reading - to sort the pages into the only correct order, revealing six murder victims and their respective murderers. Only three puzzlers have ever solved the mystery of Cain's Jawbone: do you have what it takes to join their ranks? Please note: this puzzle is extremely difficult and not for the faint-hearted.

**Imagining Personal Data** - Vaike Fors 2020-05-04

Digital self-tracking devices and data have become normal elements of everyday life. Imagining Personal Data examines the implications of the rise of body monitoring and digital self-tracking for how we inhabit, experience and imagine our everyday worlds and futures. Through a focus on how it feels to live in environments where data is emergent, present and characterized by a sense of uncertainty, the authors argue for a new interdisciplinary approach to understanding the implications of self-tracking, which attends to its past, present and possible future. Building on social science approaches, the book accounts for the concerns of scholars working in design, philosophy and human-computer interaction. It problematizes the body and senses in relation to data and tracking devices, presents an accessible analytical account of the sensory and affective experiences of self-tracking, and questions the status of big data. In doing so it proposes an agenda for future research and design that puts people at its centre.

**Tumors and Cysts of the Jaws** - Robert A. Robinson 2012

This presentation of tumors and cysts of the mandible and maxilla discusses 71 separate pathologic entities. The authors, three pathologists with extensive experience in the interpretation of jaw lesions, have utilized 353 radiographs, photomicrographs, and sketches to illustrate the wide range and scope of bone pathology within this unique part of the skeletal system. Normal embryogenesis and development of the jaws and dentition, histology of odontogenesis, and classification of tumors and cysts are covered. A comprehensive and broad array of benign, malignant, and dysplastic lesions includes odontogenic, nonodontogenic, and fibro-osseous lesions of the jaws. Representative plain radiographs, computerized tomographic images, and color photomicrographs form the basis for clinicopathologic correlation. Routine diagnostic procedures and stains are stressed as the basis for establishment of a definitive diagnosis. As a result, this volume will be an essential resource for

pathologists, radiologists, and clinicians charged with establishing a diagnosis and treatment plan for patients with tumors and cysts of the jaws.
