Expository Discourse in Children, Adolescents, and Adults - Marilyn A. Nippold 2013-03-07

School success in the 21st century requires proficiency with expository discourse -- the use and understanding of informative language in spoken and written modalities. This occurs, for example, when high school students read their textbooks and listen to their teachers' lectures, and later are asked to demonstrate their knowledge of this complex topic through oral reports and essay examinations. Although many students are proficient with the expository genre, others struggle to meet these expectations. This book is designed to provide information on the use and understanding of expository discourse in school-age children, adolescents, and young adults. Recently, researchers from around the world have been investigating the development of this genre in typical students and in those with language disorders. Although many books have addressed the development of conversational and narrative discourse, by comparison, books devoted to the topic of expository discourse are sparse. This crossdisciplinary volume fills that gap in the literature and makes a unique contribution to the study of language development and disorders. It will be of interest to a range of professionals, including speech-language pathologists, teachers, linguists, and psychologists who are concerned with language development and disorders.

The Writing Revolution - Judith C. Hochman 2017-08-07

Why you need a writing revolution in your classroom and how to lead it. *The Writing Revolution (TWR)* provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, *The Writing Revolution* can make a dramatic

difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities The Writing Revolution is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.

Creativity as Progressive Pedagogy: Examinations Into Culture, Performance, and Challenges - Raj, Ambika Gopal 2021-11-12

In every era, global progressive thinkers have used creativity as a means for cultural reformation and social justice in response to oppressive regimes. For example, theater, cartoons, social art, film, and other forms of representative arts have always been used as critical instigation to create agency or critical commentary on current affairs. In the education sector, teachers in schools often say one of two things: they are not creative or that they don't have the time to be creative given the curricular demands and administrative mandates that they are required to follow. Each day, educators are working to find exceptionally creative

ways to engage their students with limited resources and supplies, and this becomes even more of a challenge during turbulent times. *Creativity as Progressive Pedagogy: Examinations Into Culture, Performance, and Challenges* primarily focuses on pedagogical creativity and culture as related to various aspects of social justice and identity. This book presents experience-based content and showcases the necessity for pedagogical creativity to give students agency and the connections between cultural sensitivity and creativity. Covering topics such as the social capital gap, digital spaces, and underprivileged students, this book is an indispensable resource for educators in both K-12 and higher education, administrators, researchers, faculty, policymakers, leaders in education, pre-service teachers, and academicians.

Contemporary Task-Based Language Teaching in Asia - Michael Thomas 2015-02-26

Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. *Contemporary Task Based Language Teaching in Asia* looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

Assessment for Experiential Learning - Cecilia Ka Yuk Chan 2022-09-29

Chan's book explores the challenges in assessing experiential learning, deepens our understanding, and inspires readers to think critically about the purpose of assessment in experiential learning. Experiential learning has been studied and proven to be effective for student learning, particularly for the development of holistic competencies (i.e. 21st century skills, soft skills, transferable skills) considered essential for individuals to succeed in the increasingly global and technology-infused 21st century society. Universities around the world are now actively organising experiential learning activities or programmes for students to gain enriching and diversified learning experiences, however the assessment of these programmes tends to be limited, unclear, and contested. Assessment plays a central role in education policies and students' approach to learning. But do educators know how to assess less traditional learning such as service learning, entrepreneurship, cross-discipline or cross-cultural projects, internships and student exchanges? While the current assessment landscape is replete with assessments that measure knowledge of core content areas such as mathematics, law, languages, science and social studies, there is a lack of assessments and research that focus on holistic competencies. How do we assess students' ability to think critically, problem solve, adapt, self-manage and collaborate? Central to the discussion in this book, is the reason students are assessed and how they should be assessed to bring out their best learning outcomes. Offering a collection of best assessment practice employed by teachers around the world, this volume brings together both theoretical and empirical research that underpins assessment; and perceptions of different stakeholders - understanding of assessment in experiential learning from students, teachers, and policymakers. The idea of assessment literacy also plays an important role in experiential learning, for example, reflection is often used in assessing students in experiential learning but how reflection literate are educators, are they aware of the ethical dilemmas that arise in assessing students? These questions are discussed in detail. The volume also introduces a quality assurance programme to recognise student development within experiential learning programmes. The book will be particularly informative to academic developers, teachers, students and community partners who struggle with the development and assessment for experiential learning, those who plan to apply for funding in experiential learning, and policymakers and senior managements seeking evidence and advice on fine-tuning curricular, assessment designs and quality assurance.
