Education for Innovation and Independent Learning -

Ronaldo Mota 2014-01-24

Our principal concern in this book is to understand three important ideas: learning, technology and innovation, and to examine these ideas and the relationships between them in situ; that is, we examine a number of cases of learning technologies in action in two countries, England and Brazil. The purpose of our study is to provide an explanation of the means to, and constraints on,

improvements to educational policies and practices, with particular reference to innovation. We have a plethora of theoretical models that in attempting to deal with causal relations usually come to the conclusion that there are socio-economic-cultural constraints, but these observations largely remain at an abstract level and/or come to very general conclusions that are not of particular help to practitioners in the field. These issues can only be properly addressed

after examining the empirical reality and having a spectrum of cases to analyze. By combining the theoretical and the practical, our aim is to explain how and under what conditions new modes of learning can be put into practice successfully and sustainably, in order for the learner to develop innovatory skills and dispositions for work and in the life course.

The Learning Power Approach - Guy Claxton 2018-01-26

In *The Learning Power Approach: Teaching learners to teach themselves* Guy Claxton sets out the design principles of a pedagogical formula that

aims to strengthen students' learning muscles and develop their independence, initiative, determination, and love of learning. Foreword by Carol S. Dweck. Learning is learnable! Educators can explicitly teach not just content, knowledge, and skills, but also the positive habits of mind that will better prepare students to flourish both in school and in later life. And as 'traditionalists' fight for rigour and knowledge, and 'progressives' defend the increasing focus on character and well-being, Guy Claxton's Learning Power Approach (LPA) brings resolution to this phoney and unnecessary war by offering teachers a win-win pedagogical formula that delivers good academic results while simultaneously turbocharging students' independence, initiative, and love of learning. In this groundbreaking book Guy distils fifteen years' experience with his influential Building Learning Power method to provide a set of design principles for strengthening students' learning muscles, and

together with a wealth of practical strategies and the supporting evidence that underpins them details the small tweaks to daily practice that will help teachers attend more closely to the ways in which they can shape their students' learning dispositions and attitudes. Complemented by engaging and informative classroom examples of the LPA in action and drawing from research into the fields of mindset, metacognition, grit, and collaborative learning The Learning Power Approach describes in detail the suite of beliefs, values, attitudes, and habits of mind that go in to making up learning power, and offers a thorough explanation of what its intentions and guiding principles are. Furthermore, in order to help those who are just setting out on their LPA journey, Guy presents teachers with an attractive menu of customisable strategies and activities to choose from as they begin to embed the LPA principles into their own classroom culture, and also

includes at the end of each chapter a Wondering section that serves to prompt reflection, conversation, and action among teachers. The Prodigal Tongue - Lynne Murphy 2018-04-10
CHOSEN BY THE ECONOMIST AS A BEST BOOK OF THE YEAR An American linguist teaching in England explores the sibling rivalry between British and American English "English accents are the sexiest." "Americans have ruined the English language." Such claims about the English language are often repeated but rarely examined. Professor Lynne Murphy is on the linguistic front line. In *The Prodigal Tongue* she explores the fiction and reality of the special relationship between British and American English.

By examining the causes and symptoms of American Verbal Inferiority Complex and its flipside, British Verbal Superiority Complex, Murphy unravels the prejudices, stereotypes and insecurities that shape our attitudes to our own language. With great humo(u)r and new insights, Lynne Murphy looks at the social, political and linguistic forces that have driven American and British English in different directions: how Americans got from centre to center, why British accents are growing away from American ones, and what different things we mean when we say estate, frown, or middle class. Is anyone winning this war of the words? Will Yanks and Brits ever really understand each other?

Making it tangible. Learning outcomes in science education - Sascha Bernholt 2012

One of the central features in current educational reforms is a focus on learning outcomes. Many countries have

established or revised standards to describe what teachers are supposed to teach and students are expected to learn. More recently, the emphasis has shifted to considerations of how standards can be operationalized in order to make the outcomes of educational efforts more tangible. This book is the result of a symposium held in Kiel, that was arranged by two science education groups, one at the IPN (Leibniz-Institute for Science and Mathematics Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes. The aim was to clarify central conceptions and approaches for a better understanding among the international science education community. The book is divided into five parts. In Part A, the organizers set the scene, describing the rationale for arranging the

symposium. Part B provides a broad overview about different approaches, challenges, and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes. The set of papers in Part C provides deep insights into different, although comparable approaches which aim to frame, to assess, and to promote learning and learning outcomes in science education. Smaller projects are presented as well as broad, coordinated national programs. The papers in Part D outline the individual historical development from different national perspectives, reflecting the deficits and problems that led to current reforms. Finally, a summary of the organizers analyses the conclusions from different vantage points.

Curriculum and Assessment in English 3 to 11 - John

Richmond 2017-04-21

Curriculum and Assessment in English 3 to 11: A Better Plan provides an overview of the subject in considerable breadth and depth, and offers a clear, balanced and forceful critique

of the current language and literacy curriculum and its assessment arrangements for 3- to 11-year-olds in England, and of developments in the area during the past thirty years. The book restates fundamental truths about how pupils speak, read and write English with confidence and control. It describes how English can be taught most effectively, calls for an urgent review of some aspects of the current National Curriculum and its associated tests, and - crucially - proposes viable alternatives. This invaluable resource for those working in English, language and literacy education has a wide perspective and takes a principled and informed pedagogical approach. Based on a series of much-admired booklets released by the UKLA in 2015, this accessible guide to both theory and practice will be of interest to teachers, student teachers, teacher-educators, advisers and policy-makers in the UK and internationally.
