Philosophy and Geometry - L. Magnani
2012-12-06

Philosophers have studied geometry since ancient times. Geometrical knowledge has often played the role of a laboratory for the philosopher's conceptual experiments dedicated to the ideation of powerful theories of knowledge. Lorenzo Magnani's new book *Philosophy and Geometry* illustrates the rich

intrigue of this fascinating story of human knowledge, providing a new analysis of the ideas of many scholars (including Plato, Proclus, Kant, and Poincaré), and discussing conventionalist and neopositivist perspectives and the problem of the origins of geometry. The book also ties together the concerns of philosophers of science and cognitive scientists, showing, for example, the connections between geometrical reasoning and cognition as well as the results of recent logical and computational models of geometrical reasoning. All the topics are dealt with using a novel combination of both historical and contemporary perspectives. *Philosophy and Geometry* is a valuable contribution to the renaissance of research in the field.

The Warren Buffett Philosophy of Investment: How a Combination of Value Investing and Smart Acquisitions Drives Extraordinary Success - Elena Chirkova

2015-04-10

Revealed! The secret behind Warren Buffett's 20% return rate over 60 YEARS The Warren Buffett Philosophy of Investment reveals—for the first time—how the world's #1 investor combines his trademark value investing with a unique approach to mergers and acquisitions. The huge interest in Warren Buffett stems from the challenge to understand his history of earning more than 20% on capital annually during the last 60 years. Modern financial theory does not allow for this degree of success, nor has anyone else been able to replicate it. The book argues that Buffett's secret can be explained only if one looks beyond the theory of investing. The author sees the major drivers of his success as the transformation of Mr. Buffett's name into a super-brand of mergers and

acquisitions, as well as his hands-off policy with respect to the acquired companies. As a result, Buffett enjoys numerous opportunities to buy first-class companies at moderate prices and keeps the existing good managers responsible for further value creation. Elena Chirkova is a professor of finance in the Higher School for Economics in Moscow and was previously Head of Corporate finance for Deloitte's office in Russia.

Teaching and Digital Technologies: Big Issues and Critical Questions helps both pre-service and in-service teachers to critically question and evaluate the reasons for using digital technology in the classroom. The text directly engages with policy, the Australian Curriculum, pedagogy, learning and wider issues of equity, access, generational stereotypes and professional learning. The contributors to the

book are notable figures from across a broad range of Australian universities, giving the text a unique relevance to Australian education while retaining its universal appeal. *Teaching and Digital Technologies* is an essential contemporary resource for early childhood, primary and secondary pre-service and in-service teachers in both local and international education environments.

Reflective practice has moved from the margins to the mainstream of professional education. However, in this process, its radical potential has been subsumed by individualistic, rather than situated, understandings of practice. Presenting critical perspectives that challenge the current paradigm, this book aims to move beyond reflective practice. It proposes new conceptualisations and offers fresh approaches relevant across professions. Contributors include both academics and practitioners concerned with the training and development of

professionals. Definitions of reflection (which are often implicit) often focus on the individual's internal thought processes and responsibility for their actions. The individual - what they did/thought/felt - is emphasised with little recognition of context, power dynamics or ideological challenge. This book presents the work of practitioners, educators, academics and researchers who see this as problematic and are moving towards a more critical approach to reflective practice. With an overview from the editors and fourteen chapters considering new conceptualisations, professional perspectives and new practices, *Beyond Reflective Practice* examines what new forms of professional reflective practice are emerging. It examines in particular the relationships between reflective practitioners and those upon whom they practise. It looks at the ways in which the world of professional work has changed and the ways in which professional practice needs to change to meet the needs of this new world. It will be

relevant for those concerned with initial and ongoing professional learning, both in work and in educational contexts.

Look, a Negro! - Robert Gooding-Williams
2013-11-26

In *Look, a Negro!*, political theorist Robert Gooding-Williams imaginatively and impressively unpacks fundamental questions around race and racism. Inspired by Frantz Fanon's famous description of the profound effect of being singled out by a white child with the words *Look, a Negro!*, his book is an insightful, rich and unusually wide-ranging work of social criticism. These essays engage themes that have dominated debates on race and racial identity in recent years: the workings of racial ideology (including the interplay of gender and sexuality in the articulation of racial ideology), the viability of social constructionist theories of race, the significance of Afrocentrism and multiculturalism for democracy, the place of

black identity in the imagination and articulation of America's inheritance of philosophy, and the conceptualization of African-American politics in post-segregation America. *Look, a Negro!* will be of interest to philosophers, political theorists, critical race theorists, students of cultural studies and film, and readers concerned with the continuing importance of race-consciousness to democratic culture in the United States.

Challenging the 'European Area of Lifelong Learning' - George K. Zarifis 2013-10-29

This book critically reflects on the context in which lifelong learning policies and practices are organized in Europe with contributions of researchers and policy makers in the field.

Through a critical lens the book reinterprets the core content of the messages that are conveyed by the European Commission in the "Memorandum for Lifelong Learning", the most

important policy document in the area, which after a decade from its publication still remains the vehicle for all current developments in lifelong learning in Europe. With references to research findings, proposed actions, and applications to immediate practice that have an added value for Europeans -but which either do not appear to correspond directly to what is stipulated by the European Commission, or are completely ignored as part of the lifelong learning process- the book offers an analytic and systematic outlook of the main challenges in creating the 'European Area of Lifelong Learning'. In times as decisive as the ones we are going through today (both in social and economic terms), a critical perspective of the practices and policies adopted by the EU Member States is essential. The book follows the same structure as the Memorandum in order to debate and critically approach in separate sections the core issues that Europe faces today in relation to the idea of making a 'European

area of Lifelong Learning'.

Life Insurance Mathematics - Hans U. Gerber 2013-04-17

Halley's Comet has been prominently displayed in many newspapers during the last few months. For the first time in 76 years it appeared this winter, clearly visible against the nocturnal sky. This is an appropriate occasion to point out the fact that Sir Edmund Halley also constructed the world's first life table in 1693, thus creating the scientific foundation of life insurance. Halley's

life table and its successors were viewed as deterministic laws, i. e. the number of deaths in any given group and year was considered to be a well defined number that could be calculated by means of a life table. However, in reality this number is random. Thus any mathematical treatment of life insurance will have to rely more and more on probability theory. By sponsoring this monograph the Swiss Association of Actuaries wishes to support the "modern" probabilistic view of life contingencies. We are fortunate that Professor Gerber, an internationally renowned expert, has assumed the task of writing the monograph. We thank the Springer-Verlag and hope that this monograph will be the first in a successful series of actuarial texts. Hans Bühlmann Zürich, March 1986
President Swiss Association of Actuaries Preface
Two major developments have influenced the environment of actuarial mathematics. One is the arrival of powerful and affordable computers; the once important problem of

numerical calculation has become almost trivial in many instances.

Understanding Global Cultures - Martin J. Gannon 2015-02-16

In the fully updated Sixth Edition of *Understanding Global Cultures: Metaphorical Journeys Through 34 Nations, Clusters of Nations, Continents, and Diversity*, authors Martin J. Gannon and Rajnandini Pillai present the cultural metaphor as a method for understanding the cultural mindsets of individual nations, clusters of nations, continents, and diversity in each nation. A cultural metaphor is any activity, phenomenon, or institution that members of a given culture consider important and with which they identify emotionally and/or cognitively, such as the Japanese garden and American football. This cultural metaphoric approach identifies three to eight unique or distinctive features of each cultural metaphor and then discusses 34 national cultures in terms of these features. The book demonstrates how metaphors are guidelines to help outsiders quickly understand

what members of a culture consider important.

This volume is a collection of eight articles on
the general topic of translation. The common
element running through them all is the analysis
of samples of tourist literature and their
translations, from a pragmatic point of view. The
languages concerned are mainly English and
Spanish, but examples of German and French

approaches are multifaceted. Relevance theory,
systemic-functional linguistics and discourse
analysis are some of the theoretical standpoints
taken as a background. The book covers
phenomena as varied as translation quality
assessment, audience design and perlocutionary

effects, dealing also with more specific features like thematic structure, inference and propositional meaning, discourse markers and grammatical metaphor in order to provide a wide range of analyses for the specialised

reader.
