Essentials of Management for Healthcare

Professionals - Hari Singh 2017-12-15

Medical care is an industry and private providers and hospitals are the major service providers. They operate on business principles. Hospitals are getting highly specialized and complex. The diagnostics and therapeutics are technology intensive. Private establishments have to compete with one another to remain in business. They strive to induct the best talent and latest technical know-how, resulting in ever-increasing costs to patients. Patients, who pay high charges, demand quality as a matter of right. To meet the challenge, hospitals are constrained to bring in professionalism in their systems and services. They appoint qualified professional managers to manage their clinics and hospitals with a view to sparing health professionals to focus on clinical care. Whether right or wrong, 'management' is often associated with authority and power. As a result, the medical professionals are reduced to secondary level in some organizations. To retain

commanding positions in medical organizations, it has become necessary for the healthcare professionals to learn 'management', at least its basics. On the other hand, non-medical managers while managing healthcare services do not get the required cooperation from the medical professionals, as the latter are often secretive and not willing to share medical knowledge. If medical knowledge is demystified, non-medical managers can perform many functions in healthcare organizations proficiently. Both medical and non-medical managers can complement each other in providing quality healthcare services. The book aims to orient clinicians (including physicians and nurses) and other healthcare professionals on the essentials of business management and to familiarize them with management terms and jargon. They can learn to be effective managers besides being health professionals. Similarly, non-medical managers can get familiarized to nuances of clinical care and special managerial

requirements of healthcare facilities. They will be able to relate processes in healthcare settings with the concepts of business management. They can develop expertise on patient relationship management

Training and Development in Organizations
- Stanley C. Ross 2018-10-03

Training and Development in Organizations introduces students to the field of training and development, showcasing how the role and

function of training within an organization supports the organization's efforts at fulfilling its mission. Focusing on six themes – strategic view; training paradigm; training model; types of training; rubrics; and andragogy, a theory focused specifically on the adult learner – the author offers an applied approach to designing and implementing a training program. Readers will learn about different types of training programs, ranging from simple to complex, while a model program design demonstrates the critical elements associated with designing a program, such as subjects, time frame, learning objectives, and more. Practical exercises and thought-provoking end of chapter questions help students learn how to apply the concepts successfully, while Chapter Twelve specifically includes a variety of practical exercises for use in application-oriented assignments. Undergraduate students of human resource management, and training and development, as well as business managers seeking to develop

their training knowledge, will appreciate this commonsense treatment of the subject. Basic Concepts of Health Care Human Resource Management - Nancy J. Niles 2013

Sports Management and Sports Humanities -
Kazuyuki Kanosue 2015-07-13

This book focuses on (1) sports management, (2) sports economics and policy, and (3) sports humanities. The fact that sports humanities is a part of the sports management education program means that a person with extensive knowledge—not only business-related comprehension but also acquaintance with art-related fields, such as the humanities and law—will play a central role in sports management in the next generation. The former two parts aim to provide a clear understanding of sports management and marketing, including

the motivational and/or emotional components of fan behavior and sports participation, sports club management, sports sponsorship, athlete reputation management, sports economics and elite sports policy. As stated above, various topics can be found in sports management research from the macro to the micro point of view and they are not individually separated but intimately connected. Moreover, given the interdisciplinary nature of sports management, specific, common and cross-border issues arise in each country. Data from several countries are included in the sports management part. Research beyond borders and collaborative research are expected to increase more significantly than before. Researchers in sports management are expected to find the best answers to such questions as how to manage sports-related organizations or people effectively, how to stimulate the global or local economy and exert social impact through sports, and how to help people gain well-being through

sports. These research questions have not changed all through the ages and across the globe. In this book, the researchers also try to find the optimized solution in each topic and readers can find traces of their passionate exploration.
