Designated a Doody's Core Title! "The construction of the doctor of nursing practice (DNP) and the clinical nurse leader (CNL) set in motion a sea change in graduate nursing education. In this book, Fitzpatrick and Wallace document the history, the driving forces, and the expectations for these new roles while providing a starting point for capacity building for the development of DNP and CNL educational programs." --Nursing Education Perspectives The Research Journal of the National League for Nursing "This [book] is essential reading for

graduate nursing students who are considering pursuing an advanced degree in nursing." Helping the Hard-core Smoker - Daniel F. Seidman 1999

This book constitutes a major new resource for professionals working with hard core smokers and their families. It is designed as a practical, clinically useful and up-to-date guide for all those in a position to intervene: mental health professionals, physicians, dentists, nurses, pharmacists and other health care professionals, clergy, human resource and employee assistance program corporate staff, and teachers and guidance counselors. New research suggests that difficult-to-treat smokers often have emotional problems adjusting to stopping smoking. Some also have psychiatric diagnoses or abuse other substances. These are factors which interfere with their efforts to quit. Because these difficulties have been poorly understood, hard-core smokers have not been provided with adequate resources and skills to overcome their addiction. These smokers are in need of increasingly comprehensive assessment and treatment. Despite massive public health education about the dangers of cigarette smoking, rates of smoking among the population are no longer declining in the United States and the success rates of clinical programs for smokers remain low. Helping the Hard-Core Smoker seeks to explain why current approaches are often inadequate and how best to help today's highly nicotine-dependent smokers who are struggling with their addiction quit.

It provides a comprehensive and critical perspective on the totality of variables impacting curricular decisions... This book provides readers with a comprehensive overview of curriculum development, redesign, and evaluation processes and exposes them to the variables impacting curricular decisions... 92 - 4 Stars."Kathleen A. Poindexter, PhD, MSN, RN, CNE, Doody's Book Reviews New Edition of The Leading Nursing Text on Curriculum Development and Evaluation! This third edition of the leading nursing text on curriculum development and evaluation continues to address relevant NLN and AACN core competencies for curricula in all undergraduate and graduate nursing programs. Written for graduate students and faculty, this new edition responds to the many changes that have occurred in nursing and education since the second edition was published. These include the continued shortage of nursing faculty and the projected additional losses of experienced faculty due to impending retirements, as well as the implementation of the Affordable Care Act and Consensus Model for Advanced Practice Nursing. This third edition covers curriculum development and evaluation in detail and provides the knowledge and practical applications needed by new and experienced faculty to confidently embrace the academic role. With an emphasis on interdisciplinary collaboration throughout, the text focuses on the growth of simulation, guidance for new faculty transitioning from a clinical to academic role, developing curricula for practice and academic settings, program evaluation, accreditation activities, and recommendation for research in nursing education. Also addressed is the explosion of DNP programs across the country and its effect on practice and education, as well as the controversy surrounding the use of simulation. Chapter objectives, discussion points, learning activities, references and a glossary enhance learning and retention of material. The text is a valuable resource for CNE certification review. New to the Third Edition:

New chapter: Role of Faculty in Curriculum Development and Evaluation New chapter: Financial Support and Budget Management for Curriculum Development New chapter: Research and Evidence-Based Practice in Nursing Education Emphasis on guiding the assimilation of new instructors into faculty roles of program and curriculum development, instructional design, and student evaluation New content on curriculum evaluation, financial support, and budget management Strong focus on Interdisciplinary Educational Collaboration throughout Addresses the need for preparing more faculty to educate thousands of new nurses as defined by the IOM Report, the Affordable Care Act, and the Consensus Model Instructor Materials including: PowerPoint slides, syllabi, teaching/learning strategies, learning activities and associated rubrics for grading.

Integrating Research and Practice - Institute of Medicine 2015-03-04

Health care has been called one of the most complex sectors of the U.S. economy. Driven largely by robust innovation in treatments and interventions, this complexity has created an increased need for evidence about what works best for whom in order to inform decisions that lead to safe, efficient, effective, and affordable care. As health care becomes more digital, clinical datasets are becoming larger and more numerous. By realizing the potential of knowledge generation that is more closely integrated with the practice of care, it should be possible not only to produce more usable evidence to inform decisions, but also to increase the efficiency and decrease the costs of doing clinical research. Patient-Centered Clinical Research Network, or PCORnet, is a nation-wide patient-centered clinical research network intended to form a resource of clinical, administrative, and patient data that can be used to carry out observational and interventional research studies and enhance the use of clinical data to advance the learning health care system. The primary goal of the first phase of PCORnet will be to establish the data infrastructure necessary to do such research. In April and June 2014 the Institute of Medicine's Roundtable on Value and Science-Driven Health Care convened two workshops aimed at accelerating progress toward real-time knowledge generation through the seamless integration of clinical practice and research, one of the fundamental concepts of a continuously learning health system, centered on the development of the PCORnet. The first workshop brought together health care system leaders, both administrative and clinical, and researchers to consider issues and strategic priorities for building a successful and durable clinical research network and facilitate progress

toward a continuously learning health care system more broadly, including issues related to science, technology, ethics, business, regulatory oversight, sustainability, and governance. The second workshop focused on implementation approaches. Health system CEOs convened to consider strategic priorities and explore approaches to implementation. These workshops will inform the decisions of field leaders moving forward, including PCORI, the PCORnet steering committee, and PCORnet grantees. Integrating Research and Practice is the summary of the presentations and discussions of the workshops.

The Future of Nursing - Institute of Medicine 2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To

ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Health Professions Education - Institute of Medicine 2003-07-01

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order

to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.
