Kojun Puzzles: A rectangular or square grid is divided into regions. Some cells contain numbers. Each region must be filled with each of the digits from 1 to the number of cells in the region. When two numbers are orthogonally adjacent, the numbers must be different. The upper number of two vertically adjacent numbers in the same region must be greater than the lower number.

Math Puzzles for High School: Sign in Puzzles - The Best Stress Relief Puzzles - Rebecca Howell 2018-09-10

Sign In is played on a square grid. The goal is to fill in each cell with numbers from 1 to N, where N is the size of the puzzle's side. No number may appear twice in any row or column. Some digits may be given at the start. If absolute difference between two digits in neighbouring cells equals 1, then they are separated by a sign "+" or "-." If a border between cells contains a sign "+," a digit in a left or upper cell is one lower than a digit in a right or lower cell. If a border between cells contains a sign "-," a digit in a left or upper cell is one bigger than a digit in a right or lower cell. All instances of consecutive digits are shown by these

Mathematical Puzzles - Peter Winkler 2003-12-26

Collected over several years by Peter Winkler, of Bell Labs, dozens of elegant, intriguing challenges are presented in Mathematical Puzzles. The answers are easy to explain, but without this book, devilishly hard to find. Creative reasoning is the key to these puzzles. No involved computation or higher mathematics is necessary, but your ability to construct a mathematical proof will be severely tested--even if you are a professional mathematician. For the truly adventurous, there is even a chapter on unsolved puzzles.

Entertaining Mathematical Puzzles - Martin Gardner 1986-10

Playing with mathematical riddles can be an intriguing and fun-filled pastime — as popular science writer Martin Gardner proves in this entertaining collection. Puzzlists need only an elementary knowledge of math and a will to resist looking up the answer before trying to solve a problem. Written in a light and witty style, *Entertaining Mathematical Puzzles* is a mixture of old and new riddles, grouped into sections that cover a variety of mathematical topics: money, speed, plane and solid geometry, probability, topology, tricky puzzles, and more. The probability section, for example, points out that everything we do, everything that happens around us, obeys the laws of probability; geometry puzzles test our ability to think pictorially and often, in more than one dimension; while topology, among the "youngest and rowdiest branches of modern geometry," offers a glimpse into a strange dimension where properties remain unchanged, no matter how a figure is twisted, stretched, or compressed. Clear and concise comments at the beginning of each section explain the nature and importance of the math needed to solve each puzzle. A carefully explained solution follows each problem. In many cases, all that is needed to solve a puzzle is the ability to think logically and clearly, to be "on the alert for surprising, off-beat angles...that strange hidden factor that everyone else had overlooked." Fully illustrated, this engaging collection will appeal to parents and children, amateur mathematicians, scientists, and students alike, and may, as the author writes, make the reader "want to study the subject in earnest" and explains "some of the inviting paths that wind away from the problems into lush areas of the mathematical jungle." 65 black-and-white illustrations.

Mind-stretching Math Puzzles - Derrick Niederman 2005

Presents an array of mathematical puzzles, gives hints in a separate section as to how to find the answers, and then explains the answers in a final section.

Puzzles for Brain Exercise - Sandra Berry 2018-07-29

Str8ts (also known as "Straights") is a logic puzzle, invented by Jeff Widderich (Canada). It is a grid, partially divided by black cells into compartments. Each compartment, vertically or horizontally, must contain a straight - a set of consecutive numbers, but in any order (for example: 2-1-3-4). The aim is to fill all white cells with the numbers from 1 to N (where N is the size of the grid). No single number can repeat in any row or column. Clues in black cells remove that number as an option in that row and column, and are not part of any straight. brain teasers with answers - brain teaser puzzles - brain teaser games - brain teasers for adults - maths puzzles with answers - brain puzzles for adults - math puzzles for adults - brain teasers riddles - mind puzzle games - mind puzzles for adults - mind teasers - brain teaser puzzles for adults - fun for the brain - puzzle games for adults - brain busters - math brain teasers - funny brain teasers - brain teasers riddles with answers - logic brain teasers - brain teasers and answers - riddles and brain teasers
