Comprehensive coverage of medical

terminology creates a distinction between terms built from word parts, which are usually based on Greek or Latin, and those terms NOT built from word parts, which are based on eponyms, acronyms, or terms from modern language. Systematic presentation provides a foundation of word parts (prefix, suffix, word root, and combining vowel), then builds words by combining the parts. Case studies ask students to interpret medical terms used in medical records and to translate everyday language into medical language. Full-color illustrations encourage students to apply the meaning of word parts by labeling anatomical figures. Abbreviations tables introduce abbreviated medical terms related to chapter content, and are supplemented with exercises, flashcards, and practice quizzes. Reviews of word parts and terms provide students the practice they absolutely need to define, pronounce, and spell medical terminology. More than 400 flashcards enable students to review word parts whenever and wherever they want. Interactive exercises and games on the Evolve website provide endless opportunities to practice building, hearing, and spelling terms. Medical Terminology Online (MTO) provides accessible, interactive exercises and supplementary content in a course companion to help students master the medical terminology presented in the text. With Elsevier Adaptive Learning accessible within the modules, MTO allows students to learn faster by delivering content precisely when it's needed, and it constantly tracks student performance! Available separately. NEW! Organization of word part tables in each chapter allows the instructor to teach body systems in any order. NEW! Clinical note-taking exercises teach students how to convert common symptoms into correct medical terminology.

MEDINFO 2019: Health and Wellbeing e-Networks for All - L. Ohno-Machado 2019-11-12
Combining and integrating cross-institutional data remains a challenge for both

researchers and those involved in patient care. Patient-generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life conditions and also helping patients play a more active role in their own care. This book presents the proceedings of MEDINFO 2019, the 17th World Congress on Medical and Health Informatics, held in Lyon, France, from 25 to 30 August 2019. The theme of this year's conference was 'Health and Wellbeing: E-Networks for All', stressing the increasing importance of networks in healthcare on the one hand, and the patient-centered perspective on the other. Over 1100 manuscripts were submitted to the conference and, after a thorough review process by at least three reviewers and assessment by a scientific program committee member, 285 papers and 296 posters were accepted, together with 47 podium abstracts, 7 demonstrations, 45 panels, 21 workshops and 9 tutorials. All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks: interpreting health and biomedical data, supporting care delivery, enabling precision medicine and public health, and the human element in medical informatics. The posters are divided into the same four groups. The book presents an overview of state-of-the-art informatics projects from multiple regions of the world; it will be of interest to anyone working in the field of medical informatics.
