The 14 chapters written by a selected team of experts investigate the ways in which companies are embracing their responsibility through a variety of biodiversity initiatives and innovative models designed to

improve the recording, reporting and valuing of biodiversity. Global case studies look at biodiversity accounting in Africa, Asia, Australasia, Europe and South America. 2017-01-26

This book critically analyzes the concept of strategic management accounting, the implications this emerging paradigm will have on the accounting profession, and the ramifications for businesses at large. This research examines current literature, and illustrates these concepts with current market examples. This manuscript approaches the topic in a way that is unique by linking the concept of SMA to

the integrated reporting framework. In essence, strategic management accounting is a theory with broad-based support, but the IR framework and reporting structure provides a vehicle through which progress, costs, and benefits of a more strategic accounting function can be evaluated. Focusing on principles, primarily for internal management utilization, the following provides an outline and summary of concepts and techniques that can be used to elevate the role of the management accounting function. Whether you are a management expert, an accounting professional, or simply someone looking to keep up to date with emerging business trends, this text provides the content, and action-oriented steps to meet those expectations.

**Accounting, Organizations, and Institutions** - Christopher S. Chapman 2009-08-13

Accounting has an ever-increasing significance in contemporary society. Indeed, some argue that its practices are fundamental to the development and functioning of modern capitalist societies. We can see accounting everywhere: in organizations where budgeting, investing, costing, and performance appraisal rely on accounting practices; in financial and other audits; in corporate scandals and financial reporting and regulation; in corporate governance, risk management, and accountability, and in the corresponding growth and influence of the accounting profession. Accounting, too, is an important part of the curriculum and research of business and management schools, the fastest growing

sector in higher education. This growth is largely a phenomenon of the last 50 years or so. Prior to that, accounting was seen mainly as a mundane, technical, bookkeeping exercise (and some still share that naive view). The growth in accounting has demanded a corresponding engagement by scholars to examine and highlight the important behavioural, organizational, institutional, and social dimensions of accounting. Pioneering work by accounting researchers and social scientists more generally has persuasively demonstrated to a wider social science, professional, management, and policy audience how many aspects of life are indeed constituted, to an important extent, through the calculative practices of accounting. Anthony Hopwood, to whom this book is dedicated, has been a leading figure in this endeavour, which has effectively defined accounting as a distinctive field of research in the social sciences.

The book brings together the work of leading international accounting academics and social scientists, and demonstrates the scope, vitality, and insights of contemporary scholarship in and on accounting and auditing.

### **Value Creation in Management Accounting -**

CJ McNair-Connolly

2013-05-31

Value creation is at the heart of an economic enterprise, defining its capability to serve customers and generate profits and growth. This fact has led to an ever-increasing set of tools and techniques that start with customers, focusing on serving their preferences from the very inception of a product until its disposal. And this data is required to implement a value creation approach that has its roots in the Management Accounting System (MAS). The resulting model is called the Value-based Cost Management System (VCMS). If you or any manager want to take the lessons you learned in product development, process

management, and marketing, this book will help you extend this knowledge to your MAS.

This book makes this transformation both logical and easy to implement, with a focus on the new types of information that can be garnered when the MAS is modified to fit the value creation approach. The authors of the book will provide, upon request, a simplified automated data collection template that will ease the implementation process.
