Transaction Criteria - Avrom Sherr 1992

The assessment of the quality of an intangible, professional service such as the provision of legal aid is a difficult yet important task. As a major purchaser of legal services on behalf of the taxpayer and for the benefit of the consumer, the Legal Aid Board is seeking to work in a partnership arrangement with solicitors providing legal aid services, including those in law centres and advice agencies. This partnership was outlined in the franchising proposals developed by the Legal Aid Board and outlined in Franchising: The Next Steps. An essential element of these proposals is the use of the transaction criteria presented here. The criteria cover green form/ABWOR and emergency legal aid work only and are designed to provide a mechanism for the collection of

objective evidence that a legal adviser has considered the relevant process issues in particular cases.

Operating Systems - William Stallings 2009

For a one-semester undergraduate course in operating systems for computer science, computer engineering, and electrical engineering majors. Winner of the 2009 Textbook Excellence Award from the Text and Academic Authors Association (TAA)! Operating Systems: Internals and Design Principles is a comprehensive and unified introduction to operating systems. By using several innovative tools, Stallings makes it possible to understand critical core concepts that can be fundamentally challenging. The new edition includes the implementation of web based animations to aid visual learners. At key points in the book,

students are directed to view an animation and then are provided with assignments to alter the animation input and analyze the results. The concepts are then enhanced and supported by end-of-chapter case studies of UNIX, Linux and Windows Vista. These provide students with a solid understanding of the key mechanisms of modern operating systems and the types of design tradeoffs and decisions involved in OS design. Because they are embedded into the text as end of chapter material, students are able to apply them right at the point of discussion. This approach is equally useful as a basic reference and as an up-to-date survey of the state of the art.

How To Get Best Value From HR - Peter Reilly 2017-05-15

An efficient and cost-effective HR function is essential to the successful running of any organization. And yet for many businesses it is impossible or costly to have HR staff in every office. This is particularly true for companies who have many branches, such as banks and building societies. So what are they to do?

Increasingly they are turning to shared services by creating a unit within the organization that typically undertakes personnel administration and basic operational support. This may be delivered to managers and employees through some combination of call centre, personal contact or intranet. Creating a shared services centre enables the HR function to redefine its relationship with its stakeholders. It can become more of a strategic player and make a more business-focused contribution. This book explains what shared services are and what they look like for the HR function. It describes why organizations opt for shared services and what activities are included. It sets out the relationship between shared services and the other HR activities, and between HR and line management. How To Get Best Value From HR outlines the process of introducing shared services, from identifying customer needs through designing the structure to implementation and monitoring. It also outlines

the likely pitfalls and, importantly, offers possible solutions. In particular the book highlights the big design issues, including whether to outsource services, where a shared services centre should be located, how services should be delivered and organized, including through the option of e-HR. Crucially it features an extended case study of the Royal Bank of Scotland's experience of introducing HR shared services, providing a unique insight into the reality of this new way of working.
