New Communication Technologies in Developing Countries - Jarice Hanson 2013-09-13

This volume explores how a number of developing countries -- including India, Malaysia, Columbia, Brazil, and Saudi Arabia -- are responding to the pressures of the information society. Infrastructural development, policies, and social systems are investigated, and models of information technologies and society are proposed in order to better reference the differences and similarities among the nations profiled. The authors identify the social technology perspective via the assimilation of technology in lifestyles and social systems. From this perspective, the diffusion of technologies is analyzed with a critical eye for theories of culture lag, diffusion and innovation, and technological determinism and liberalism. The social perspective is a new addition to development studies, and the reader may see how, as the global information society comes into focus, the social dimensions are more important than some theorists originally envisioned.

Power Supply in Telecommunications - Hans Gumhalter 2012-12-06

An important part of any communication system is its power supply

system. The smooth operation of all communications depends on the quality of the power supply and on the operational reliability of the increasingly complex equipment and devices used for this purpose. This book describes current power supply technologies, it explains the circuit techniques using easy-to-understand examples and illustrations. Also covered are automatic control, grounding and protection techniques as well as the design of battery and grounding installations. The book is conceived as a practical guide for those involved in planning installing, commissioning and servicing telecommunication systems, but it is also useful as an introduction to the subject.
