This book is unique as it goes beyond the classical academic approach, and opts for an

approach whereby the theoretical insights are systematically illustrated by concrete cases and exercises. Beginning with a description of the current banking and entrepreneurial landscape, the book proceeds to examine the basic concept of financial management. The business plan and financing plan become the working tools in the author's search for optimal financing and in determining the value of the enterprise. This is followed by an analysis of all forms of debt financing such as overdraft, investment credits, straight loans, leasing and factoring. Subsequently, the book examines mezzanine financing, formal and informal venture capital, including business angels and crowdfunding, as well as stock quotations and initial public offerings. The book concludes with a review on the Basel Accords, from the viewpoint of the entrepreneur. This way, the author provides ammunition for managers confronted with banks or venture capitalists who claim that some actions are not possible 'because of Basel'.
