Economic Analysis of Sub-Saharan Africa Real Estate Policies - F. N. Hammond 2010-04-29

Investments are widely accepted as the matchless path to development. Real estate is as much a prerequisite for investment as are capital and labour. Nonetheless, relative progress in ensuring that arrangements concerning real estate are compatible with desired magnitudes of investments in Africa remains far from satisfactory. Treatment of real estate in the development literature remains tangential and incoherent. This volume explores why real estate policies in Africa have not worked well and examines how they can or should be more organised for efficient and successful outcomes. This book is essential reading for all interested in development economics, real estate economics and African studies.

Part I provides a general introduction. Part II presents basics from numerical analysis on R^n , including linear equations, iterative methods, optimization, nonlinear equations, approximation methods, numerical integration and differentiation, and Monte Carlo methods. Part III covers methods for dynamic problems, including finite difference methods, projection methods, and numerical dynamic programming. Part IV covers perturbation and asymptotic solution methods. Finally, Part V covers applications to dynamic equilibrium analysis, including solution methods for perfect foresight models and rational expectation models. A website contains supplementary material including programs and answers to exercises.

Introductory Economics - Michael Veseth 2014-05-10

Introductory Economics deals with the national economy as a whole—macroeconomics, in terms of inflation and unemployment. The book also discusses individual economic decision-makers—microeconomics, in view of the problems of scarcity and choice. Macroeconomics uses the market model of demand and supply as a tool to analyze the causes of, and present some cures for modern economic ailments. The text examines the economics of government fiscal policies with the framework of an aggregate demand and supply model. The book compares monetary policy and fiscal policy, explains the monetarist model of economic activity, and also investigates the roles of money, credit, interest rates. These economic activities have international consequences such as in trade, exchange rates, and on prevailing and future national economic policies. In microeconomics, the book focuses on the economics of exchange, the market mechanisms that increase the gains from trade, and the problems of choice facing consumers and producers in a competitive market. The text also tackles the problems found in resource markets (labor, natural resources, energy), in market failure, as well as analyzes the role of government. Economists, sociologists, students of economics or business, general readers interested in real-world economics, and policy makers involved in national economic development will find the book valuable.

Construction Supply Chain Economics - Kerry London 2007-12-11

This is the first comprehensive investigation of the industrial sourcing and procurement practices throughout sixty-eight construction industry supply channels across seven major commodity sectors at all levels. London presents real-world case studies to combine theory and practice to describe the economic structural and behavioural characteristics of sectors integral to the construction industry performance. Construction Supply Chain Economics details 'everyday' experiences and procurement decisions made by people in firms in the industry related to projects as they seek out other firms to work with during the tendering stage. London creates a language that enables us to classify and understand behaviour and recognise the impact of our decisions on firms and projects within the industry.
