Doris S. Warriner 2021-08-24

This edited volume demonstrates how an educational linguistics approach to inquiry is well positioned to identify, examine, and theorize the language and literacy dimensions of refugee-background learners' experiences. Contributions (from junior and senior scholars) explore and interrogate the policies, practices and ideologies of language and literacy in formal and informal educational settings as well as their implications for teaching and learning. Chapters in this collection will inform advances in the research base, future innovations in pedagogy, the professional development of teachers, and the educational opportunities that are made available to refugee-background children, youth and adults. The work showcased here will be of particular interest to teachers and teacher educators committed to inclusion, equity, and

diversity; those developing curriculum and/or assessment; and researchers interested in the relationship between language practice, language policy and refugee education.

**Corrupt Cities** - 2000

Much of the devastation caused by the recent earthquake in Turkey was the result of widespread corruption between the construction industry and government officials. Corruption is part of everyday public life and we tend to take it for granted. However, preventing corruption

helps to raise city revenues, improve service delivery, stimulate public confidence and participation, and win elections. This book is designed to help citizens and public officials diagnose, investigate and prevent various kinds of corrupt and illicit behaviour. It focuses on systematic corruption rather than the free-lance activity of a few law-breakers, and emphasises practical preventive measures rather than purely punitive or moralistic campaigns.

Superbugs - Matt McCarthy 2020-06-09  
International Bestseller "An amazing,

informative book that changes our perspective on medicine, microbes and our future." -- Siddhartha Mukherjee, MD, New York Times bestselling author of *The Emperor of All Maladies* A New York Times bestselling author shares this exhilarating story of cutting-edge science and the race against the clock to find new treatments in the fight against the antibiotic-resistant bacteria known as superbugs. Physician, researcher, and ethics professor Matt McCarthy is on the front lines of a groundbreaking clinical trial testing a new antibiotic to fight lethal superbugs, bacteria that have built up resistance to the life-saving drugs in our rapidly dwindling arsenal. This trial serves as the backdrop for the compulsively readable *Superbugs*, and the results will impact nothing less than the future of humanity. Dr. McCarthy explores the history of bacteria and antibiotics, from Alexander Fleming's discovery of penicillin, to obscure sources of innovative new medicines (often found in soil samples), to

the cutting-edge DNA manipulation known as CRISPR, bringing to light how we arrived at this juncture of both incredible breakthrough and extreme vulnerability. We also meet the patients whose lives are hanging in the balance, from Remy, a teenager with a dangerous and rare infection, to Donny, a retired New York City firefighter with a compromised immune system, and many more. The proverbial ticking clock will keep readers on the edge of their seats. Can Dr. McCarthy save the lives of his patients infected with the deadly bacteria, who have otherwise lost all hope?
